KELLY BROTHERS NURSERIES
Dansville, N.Y.

You Can Convince Yourself of the Quality of Kelly Trees

OUR nurseries are at all times open for the inspection of anyone interested in a scientific production of nursery stock. Those of our customers who have honored us with a visit know at first hand that our products are the best. We earnestly invite your personal inspection, but remember, if you cannot visit our nurseries you can place absolute confidence in this catalog.

Do not be disappointed this year. Last year there were many who delayed ordering until our stock had been nearly sold out and they were unable to get what they wanted. You can rely on our giving your interests most careful attention, for we value highly your patronage.

HEALTHY, hardy stock and fair dealing are the principles on which this business was founded in 1880. We feel especially grateful for the confidence and support of those whom we have numbered as our regular customers since we started—also to the thousands whom we have had the pleasure of serving in the years that followed.

The most gratifying part has been not only in the amount of business we were able to do, but also in the many letters we have received from our customers each day, praising the high quality and good root system of our stock, careful packing and the good condition in which the stock was received. We promise for the future the same fair methods, superior high grade stock and careful, courteous consideration which have made us a leader among the nurseries of the United States.

We have always realized the difficulty of most fruit tree buyers—that they cannot tell by looking at a tree whether or not it will produce the kind of fruit wanted. Feeling certain that buyers would appreciate the protection it gives, many years ago we adopted the positive guarantee that every tree sold by us must produce fruit true to name.

We realize, too, that the buyer is at a great disadvantage because the price he pays for fruit trees is absolutely no indication of their quality. You can buy trees from an agent and pay his extra profit, which makes the trees very high priced, yet this does not mean that they are good trees.

You can buy direct from a nursery that does not grow all the trees it sells and take chances of getting what you order; or from a small, unknown concern whose price is no indication of the grade of trees—low, medium or high.

We cordially invite you to visit our big nursery. You will find conditions very good here. We grow all our stock under most favorable circumstances and with the direct supervision of highly experienced men. This catalog is our only salesman. Therefore, our prices are low for the quality we guarantee. You can buy from us at a big saving and know for a certainty that you are getting the very best for your money.

We solicit correspondence and any information will be given to the best of our ability. Our advice is free and we take pleasure in giving our customers the benefit of our experience. This year, next year and for years to come we have a sincere desire to have you thoroughly pleased in all of your dealings with us.

Kelly Brothers Nurseries
Dansville, New York

Why You Can Be Sure of Quality When You Buy Kelly's Trees

WHY YOU TAKE NO CHANCES WHEN YOU DO BUSINESS WITH KELLY BROS.

Kelly's Reputation Is Your Assurance of Confidence in Buying

THREE are two big reasons why, to be safe, you must base your purchase of fruit trees upon the reputation of the nursery from which you buy. First, you cannot tell by inspection what kind of fruit a tree will produce. Second, the price you pay is no indication of a tree's quality or grade.

Buy True-to-Name Trees—Kelly Nurseries
Specialize in Big, Strong, Vigorous
Rooted Trees That Grow

When you buy trees from us you do it with confidence that after you plant the trees and care for them, spending your time, labor and land on them, your Kelly trees will surely bear fruit true to name for you, the same as they have done for so many thousands of other fruit growers.

Thousands of Kelly Trees Inspected
and Labeled in 1929

You don't need to worry about getting the right variety of trees when you do business with us. Thousands of Kelly Trees have been inspected and certified to be true to name, for the 1929 season, by a corps of expert examiners from the Massachusetts Fruit Growers' Association. They have placed a lead seal on each tree which certifies that

BEFORE YOU INVEST—INVESTIGATE

You should buy your trees from reliable nurserymen. There are many poor trees—trees not true to name, trees with a poor root system and affected in one way or another—put on the market by unreliable firms and agents. Those who have bought and grown Kelly trees would not consider dealing with other concerns, but the buyer about to purchase his first fruit trees should be warned against the mistake of investing in such stock.

Kelly's Have No Agents—You Buy
Direct from the Grower

Perhaps you will receive catalogs from nursery firms and agents quoting lower prices than ours; but, remember, many buyers have proved in the past that the price of trees is no index of their value. Be sure to investigate the responsibility and integrity of those who make you un-

the tree is true to name. The Seal bears the name of the true variety it will produce and stays on the tree until it fruits. This Seal is fastened thru one of the limbs, to remain there until you get true-to-name fruit, as guaranteed by us.

And we do not stop when we have these disinterested examiners inspect our trees. Three resident New York State Inspectors make frequent inspections of our stock from seedling to railroad car.

Forty-nine Years Dollar-for-Dollar Value

For forty-nine years Kelly Brothers have been giving dollar-for-dollar value in fruit trees. We have sold many thousands of trees planted in every part of the country—trees that have proved real producers and profit payers. Some of these trees are growing near you and you can see them for yourself. You can talk with the owners and ask them all about our trees and Kelly Bros.' reputation for square dealing. We urge that you write us for the names of the fruit growers in your neighborhood who have Kelly's, because we know you will not hesitate to order from us after you see our trees and hear the good things our customers have to say about us.

Generations of Growing Nursery Trees—
With Our Guarantee Back of
Every Tree

It does not pay you to use your valuable land and to devote your time to the growing of trees only to find when they fruit that you have something you did not order, something for which you have little or no use. For your own protection against the loss of land, time, labor and money, buy trees back of which stands a firm of known responsibility and honesty that has been in business for forty-nine years, and that will still be here when your trees produce.

Professor French Says—

“KELLY TREES True to Name”

IN addition to having trees Certified True to Name and sealed with the lead seal of the Massachusetts Fruit Growers' Association, as described on pages 12 and 13 of this catalog, during the month of September, 1928, we had all of our salable Apple Trees examined by Professor A. P. French, of the Massachusetts Agricultural College, Amherst, Mass.

The examination by Professor French was for the purpose of determining for an absolute certainty that all of our Apple Trees are strictly True to Name.

Professor French is an associate of Dr. J. K. Shaw in the certification work conducted by the Massachusetts Fruit Growers' Association, and his ability to determine the correct variety of fruit trees is acknowledged by leading fruit growers.

The statement of Professor French appears herewith.

STATEMENT OF INSPECTION FOR

TRUENESS-TO-NAME

1928-1929

Amherst, Mass., Sept. 20, '28

To whom it may concern:

I have examined for True-
ness-to-Name all salable
apple stock now growing in
the nurseries of KELLY BRO-
THERS NURSERIES, Dansville,
N.Y., and I now declare that
to the best of my knowledge
and belief, these trees are
true to variety name as they
stand in the nursery rows.

Signed, A. P. FRENCH

BUDDING

Fruit Department.

Apple Trees

IT is an established fact that of all fruits the apple is the most important. It has been rightly called the "King of Fruits." Unlike other fruits its period of ripening extends nearly throughout the year, and by judicious selection of varieties, an almost constant succession may be obtained. It is not a luxury, but a staple article of food, and the demand for good apples is increasing faster than the supply. Experienced and successful farmers and orchardists agree that there is more money growing apples than in any other fruit,

and that the orchard is the farm's greatest asset. If there is any kind of trees that we specialize in growing, it is the apple. We use the very best quality of imported French Apple Seedlings on which to propagate our apples. We believe this to be of utmost importance in order that the trees may have a good foundation, be free from all disease and insure a healthy and permanent growth. We have discarded all varieties not profitable to the planter, and recommend the following varieties, giving a brief description of each.

Summer Varieties

Early McIntosh—Fruit growers are in need of an early red apple of good quality. Such an apple would sell well in all markets, and would be particularly valuable for roadside booths. Nearly

every one now knows McIntosh and likes it out of hand or however served from the kitchen. It is hardly too much to say that it is about the best general purpose apple. Who can name an early apple with fewer faults of fruit than a McIntosh ready to eat in August? That is what Early McIntosh is. Besides pleasing the taste, this early apple pleases the eye. The red is handsome; the uniform round-oblate shape is most attractive and permits packing in various packages in which the apples fit well and look well. The size of the fruit is about that of McIntosh and it is similar to and quite the equal of McIntosh in flavor. The trees are vigorous, hardy, healthy, productive, and bear annually. We can furnish Early McIntosh in one year trees only.

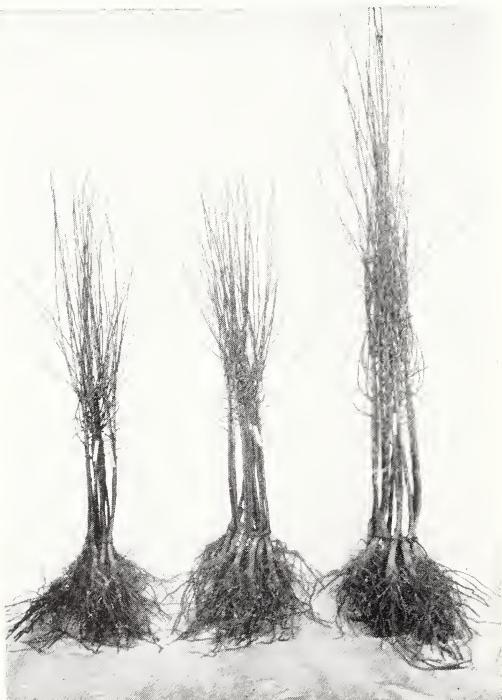

Early Harvest—(Yellow Harvest) Medium to large; pale yellow; beautiful; fine flavor. Tree moderate, erect grower, good bearer; excellent variety for both orchard and garden. Ripens in August.

Red Astrachan—Tree hardy and good bearer. Fruit very handsome, large, round, nearly covered with deep crimson, overspread with thick bloom; juicy and good, though rather acid; one of the best of the summer varieties for cooking. Ripens in August.

Sweet Bough—Large, pale yellow; sweet, tender and juicy. Tree a compact grower and abundant bearer. August.

Williams Early Red—Medium sized; dark red, sometimes yellow splashed; flesh is crisp, tender, juicy and sub-acid. August.

Yellow Transparent—Tree upright, and a very early and abundant bearer. Fruit of good size; skin clear white, turning to a pale yellow; flavor acid and very good. Ripens from ten days to two weeks earlier than Early Harvest. Ripens in August.

TWO-YEAR-OLD APPLE TREES

Apples (Continued)

Autumn Varieties

Duchess of Oldenburg—Vigorous growth; Russian; large; striped; tender, juicy, sub-acid; good; regular and abundant bearer. One of the hardiest kinds known. Ripens in September.

Fall Pippin—Very large, yellow, tender, juicy and rich. A general favorite as a fall cooking apple. Pleasant, aromatic flavor when eaten. Tree is vigorous, hardy and productive. Season, October to December.

Fameuse—(Snow Apple) Hardy, medium size; deep crimson; flesh is snowy white, tender, melting and delicious. Tree vigorous with dark wood; one of the finest dessert fruits and valuable for market. Ripens in November.

Gravenstein—This is a large, handsome apple streaked and splashed with red over a strong yellow. The flesh is yellowish, firm, fine, crisp, tender, juicy and sub-acid. In quality it ranks very good to best. September to November.

Maiden's Blush—Of uniformly large size, smooth, round, beautifully flushed with red on creamy yellow ground; flesh tender, of pleasant but not high flavor. A good market sort because of its attractiveness and the tree's heavy crops. Ripens in September.

Pound Sweet—(Pumpkin Sweet) A very large, round, yellow, russet apple, very sweet and rich. Tree a vigorous, rapid, upright grower; valuable. October and November.

Red Gravenstein—This red sport is more attractive than Gravenstein. It differs from the old Gravenstein only in the solid, dark, red colored fruits. An excellent fall apple.

Wealthy—Beautiful, moderate sized, brilliant red apple, fine quality, one of the best of its season; is relatively a good keeper. Owing to the hardiness of the tree, its adaptability to cold climates and early bearing habits, can be profitably planted as a filler. Season October to January.

McINTOSH RED

Winter Varieties

Baldwin—What the Bartlett pear is to pears the Baldwin is to apples for the Eastern and Middle states. No variety yields larger crops or bears shipment better, or is more attractive in color, size and shape than the Baldwin. It is esteemed as an eating apple, and for cooking. For a commercial orchard it can be relied upon. Large, bright red, crisp, juicy and rich; tree vigorous, upright and productive. In New England, New York, Ontario and Michigan, this is one of the most popular and profitable sorts for table or market. Keeps until April.

Ben Davis—A popular apple in Southern New York, Pennsylvania and Ohio. Fruit is medium to large, of a bright, deep red color, or red striped over clear yellow. Has a thin, tough skin. The flesh is whitish, firm, juicy and sub-acid. It is one of the best keeping apples on the market today, lasting in cold storage until June or July.

Cortland—(New variety developed by New York State Experimental Station) A fine apple resulting from the cross pollination of McIntosh and Ben Davis. Inheriting only the good qualities of each, the new apple has found additional good qualities of its own, which are rapidly making it a strong competitor of the Baldwin in popularity. The Cortland is a beautiful red apple, larger than the McIntosh, and matures a month later. Keeps late in winter and can be handled and shipped like the hardiest of other market varieties. For full description of Cortland, see Page 14.

WEALTHY

Apples—Winter Varieties (Continued)

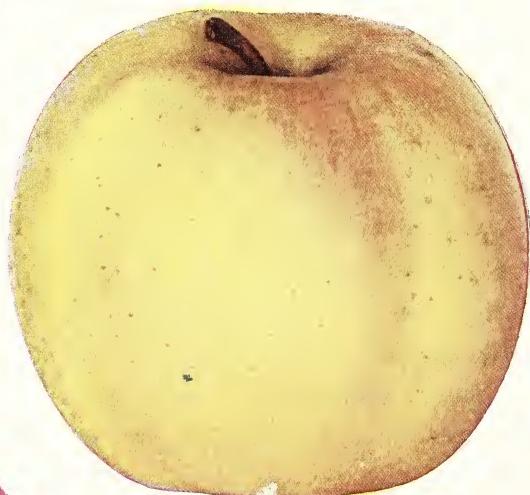

WAGENER

Delicious—A remarkable variety introduced in the West several years ago, where it is being largely planted and rapidly taking first rank both for commercial and home orchards. No new variety has ever so quickly gained popularity in so many different apple sections of our country. Fruit large, nearly covered with brilliant dark red, flesh fine grained, crisp and melting, juicy with a delightful aroma; of very highest quality. A splendid keeper and shipper. Tree one of the hardiest, a vigorous grower, with good foliage. A regular annual bearer.

BALDWIN

GRIMES' GOLDEN

tender, juicy, spicy, and rich—a splendid family sort and highly profitable for market. Tree long-lived, productive, and an early bearer. November to April.

King—(King of Tompkins Co.) One of the largest red winter apples. It is of extraordinary size, beautiful in color, attractive, and always brings the highest market price. Its size, beauty and good flavor make it in great demand. November to March.

Mammoth Black Twig—The tree is a strong grower, a regular and abundant bearer. A good winter apple. Deep red; sub-acid, very high flavored. Keeps until late spring.

McIntosh Red—Medium size, nearly covered with dark red. Flesh white, fine, very tender, juicy and refreshing, with attractive quince-like flavor. A good annual

Apples—Winter Varieties (Continued)

bearer. A very hardy variety, fruit of which is very attractive in appearance, of deep red color, good size, the flesh very tender and delicious. It is especially desirable for fancy trade. It comes into bearing young, yielding large crops of good fruit almost annually.

Northern Spy—This variety ranks about third in commercial importance with the fruit growers of Pennsylvania, New York and Ohio, being surpassed by Baldwin and R. I. Greening. Fruit is large and very attractive, being of bright red color with a delicious bloom; flesh is very juicy, crisp, tender and excellent for dessert or culinary purposes. Its fine reputation brings high prices in the market and the fruit is always in demand. The fruit is ready for use in November or December; keeps well in cold storage until April, or if more carefully handled, until May.

Northwestern Greening—Tree a splendid, vigorous grower, quite hardy. Fruit large to very large; green, becoming yellowish green when ripe; flesh yellow, fine grained and firm; flavor a good sub-acid; very smooth and attractive; should be given plenty of room in the orchard to secure large, even fruit. Keeps until March.

Old Winesap—Winter. Fine keeper; medium size, oblong, smooth, and a fine dark red; flesh yellow, crisp, tender, very juicy, aromatic, firm and good. Tree a strong grower, root-growth exceptionally strong; it comes into bearing early and is remarkable for its regular and abundant crops. One of the very best sorts for lower elevations any-

CORTLAND

WINTER BANANA

DELICIOUS

where south of Pennsylvania, from tide-water to 1,000 feet in Maryland, and to corresponding elevations south of Maryland. One of the sorts you must not overlook for these sections. When grown properly and packed in an attractive manner, it brings the highest prices in the fancy market.

Opalescent—Probably the handsomest apple ever put on the market. It is large and shapely and a veritable feast to the eye. Color light, shading to very dark crimson; skin smooth; susceptible of a very high polish, reflecting objects like a mirror; flesh yellowish, tender, juicy and good. December to March.

Apples—Winter Varieties (Continued)

KING

Rambo—Medium, flat, streaked red and yellow; very tender, juicy and fine flavored. Tree an upright grower, hardy and productive. October to December.

Red Spy—Red Spy is a typical Spy except in color. The color is a solid bright red without either stripes or splashes. The new variety has the serious fault of the parent, that of coming in bearing late, but there are many good characters to offset this fault. Thus, there are delectable quality and great beauty in the fruits, and in the tree hardiness, healthfulness, productiveness and reliability in bearing. We can furnish Red Spy in One Year Trees only.

Rhode Island Greening—This large and superior winter apple is famous over a large extent of country, and is more highly prized for cooking and eating than any other variety. It is a good keeper but will keep better if picked early. This Greening is a beautiful yellow color when ripe, and an abundant yielder. March to April.

Rome Beauty—Keeps in good condition till May and June. Large, round, mottled and striped in different shades of red; flavor and quality away above the average; appearance and size are its valuable points; always sells and always brings good prices. With an established reputation to real merit,

Rome Beauty is a variety Eastern orchardists should plant largely. Good grower, blooms late, bears heavily every year, is adapted to a wide range of soils, elevations and conditions. In Ohio, Pennsylvania, New York and West Virginia will make more money than some of the sorts which are now a large part of the total number of trees in commercial orchards.

Smokehouse—A very pleasant flavored dessert apple. Tree a vigorous grower; healthy, hardy and reliable cropper. Fruit of medium to large, uniform size and shape. Color yellow or greenish mottled with rather dark red, sometimes deepening to a solid bright red. October to March.

Spitzenburg—(Esopus). Medium to large; deep red, high flavored; valuable for commercial purposes. November to April.

Stark—Fruit fair, smooth, uniform and attractive. Large, striped, mild, sub-acid. Valuable as a keeper. A good variety for the commercial orchard because the tree is thrifty, hardy, healthy, a reliable cropper and very productive. January to May.

NORTHERN SPY

Apples—Winter Varieties (Continued)

Stayman's Winesap—Tree vigorous, hardy, spreading. An early bearer and very productive; fruit medium size, round, approaching conic, skin smooth, greenish yellow, splashed and striped with red and purple; flesh yellow, firm, tender, juicy, rich, sub-acid, aromatic, quality best. Splendid late keeper.

Tolman Sweet—Medium, pale yellow, slightly tinged with red; firm, rich and very sweet; the most valuable baking apple, vigorous, hardy and productive. Keeps until April.

Twenty Ounce—Very large, yellow striped, red, fine quality apple; good keeper. Tree vigorous grower, productive. October to January.

Wagener—(Red Winter Apple) Wagener is one of the most beautiful winter apples ever grown. It is of the highest quality, the flesh being crisp, tender and aromatic. We know of no apple possessing greater beauty or of finer quality than the Wagener. It succeeds well East and West. December to May.

Winter Banana—An excellent variety, which has stood the severest tests. Tree is hardy and will succeed in very cold climates; its wonderful productiveness will bring quicker and larger returns than any other apple in the orchard. The fruit has a richness of flavor that cannot be described. Flesh golden yellow, fine grained.

Wolf River—Fruit is very large, some specimens weighing 27 ounces, flattened, conical, highly colored. An excellent cooking apple. September to December.

Yellow Belleflower—Season, winter. A hardy apple of large size, a beautiful golden color, often with red blush; conical in shape.

York Imperial—This is a fine, hardy, large red, winter apple. It succeeds over a wide range of country. It comes into bearing at four years from planting, bears regularly and heavily. The foliage and fruit are remarkably free from scab. The fruit is of medium size, skin yellow and almost wholly covered with two shades of red, the darker one disposed in distinct stripes. Good shipper, bringing highest prices.

Place Your Order Early While Our Assortment Is Complete

R. I. GREENING

Big, strong, vigorous trees with a splendid root foundation that grows quickly in new locations.

Certified Apple Trees

READ the letter on the opposite page. It means that we have continued for 1929 the Certification of fruit trees, a procedure that we established here years ago. This is an additional safeguard for the purchaser of fruit trees.

We have to offer thousands of apple trees that have been examined and Certified to be True to Name by Dr. J. K. Shaw, of the Massachusetts State Experiment Station, Amherst, Mass., who is recognized as an authority on fruit growing throughout the United States.

To each tree so Certified a lead seal is permanently affixed through one of the branches, to stay there until the tree bears fruit True to Name, as guaranteed by us. The seal bears on its face the name of the variety of fruit the tree is Certified to bear, and on the reverse side the stamp of the Massachusetts Fruit Growers' Association.

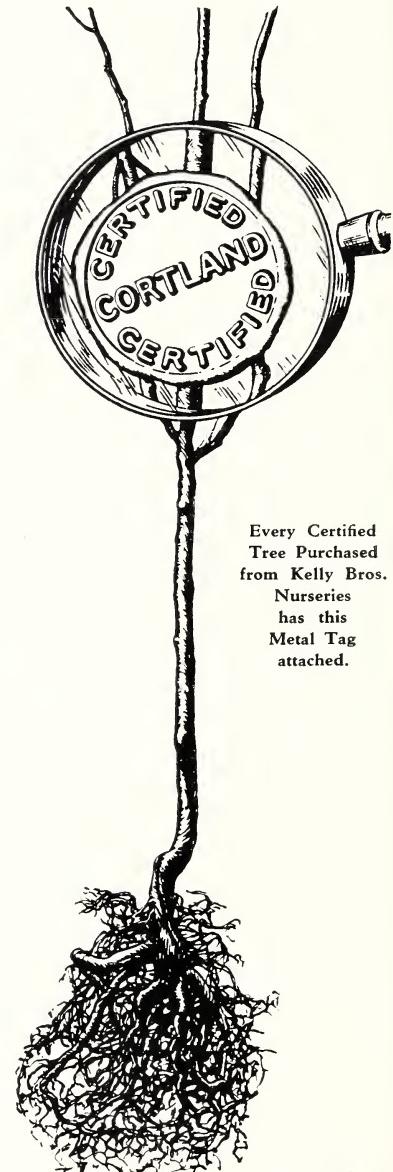

This Certification of fruit trees is a comparatively new proposition, and we are the first large nursery in the United States to co-operate with the Massachusetts Fruit Growers' Association in the work.

Owing to the expense involved and lack of time, it was impossible to have all of our apple trees Certified, but as some of our customers may prefer Certified trees, we are offering them in the varieties noted in the letter on the opposite page.

We quote what the editor of one of the leading farm papers wrote us when he learned about the Apple Tree Certification proposition: "It is not necessary in your particular case that your trees be Certified, as your reputation for supplying only trees strictly True to Name to your customers is second to none; and if every nursery had the good record of Kelly Brothers in the matter of furnishing trees True to Name the Certification of trees would not amount to so much."

Our apple trees that are not Certified carry the same guarantee as those that are Certified, but if you should prefer Certified trees, so specify on your order. Do not order any varieties in the Certified stock except those noted.

Owing to the cost of the work of Certification, it is necessary for us to charge a slight advance for the Certified trees over our regular prices for apple trees. Our prices for apple trees which are not Certified are quoted on page 6 of this catalog, and we quote the following prices on Certified trees:

MASSACHUSETTS FRUIT GROWERS' ASSOCIATION INCORPORATED

TREES CERTIFIED TO BE TRUE TO NAME
FOR
KELLY BROS. NURSERIES, DANSVILLE, N. Y.

November 22, 1928.

TO FRUIT GROWERS:

Several thousand one and two-year-old Apple trees were certified as true to name during the Summer of 1928 by this Association for Kelly Brothers Nurseries of Dansville, N. Y. This certification was in charge of Dr. J. K. Shaw of the Massachusetts Experiment Station, our agent for certification.

This does not mean that other trees sold by this nursery are misnamed nor that the trees are guaranteed in any way by this Association. It does mean that each certified tree has been carefully examined and pronounced true to name by a disinterested expert and that the danger of mixing varieties has practically been eliminated.

A lead seal is attached to each and every certified tree bearing the name of the variety and our stamp of certification as being true to name.

Trees of the following varieties were certified in 1928 for Kelly Brothers Nurseries of Dansville, N. Y.:

Baldwin	McIntosh	Stayman
Cortland	Northern Spy	Twenty Ounce
Gravenstein	R. I. Greening	Wealthy

THE MASSACHUSETTS FRUIT GROWERS' ASSOCIATION, INC.

The New Cortland Apple

YOUNG APPLE TREE

Beautifully Branched, Weather Hardened and Heavily Rooted Kelly Trees Take Hold Quickly In New Locations

Origin of Cortland Apple

Twenty-nine years ago at the New York Agricultural Experiment Station, Geneva, New York, flower buds of Ben Davis were hand pollinated with pollen from McIntosh blossoms. That was in 1898, and during the winter of 1899 eleven seeds obtained from the resulting fruit germinated and grew into trees large enough to set in the nursery that spring. In due time these young seedlings were moved to the orchard and there first bore fruit in 1911, although fruit from the budded stock had been obtained five years before. All but three of the original seedlings were quickly discarded. The seedling that was later to be called Cortland was propagated by budding to increase the supply of stock and was named Cortland, and sent out for trial in all parts of the country in 1915.

Possesses Desirable Characteristics of Both Parents

Cortland more nearly combines the good qualities and eliminates the weakness of both parents than had even been hoped for by those responsible for this remarkable variety. From the Ben Davis side of the family it derives one of its most notable and valuable characteristics, namely its ability to hang to the tree. To the credit of Ben Davis must also be entered its ability to stand handling. Those who grow Cortland testify that it handles as well as Baldwin. For its high quality Cortland must look to the McIntosh side of the house. The taste can hardly be distinguished from that of McIntosh, but is even richer if that be possible.

Description of Cortland

The fruit of Cortland is as large or larger than that of McIntosh, round to somewhat conical in shape. In color it is a bright red, blushed with darker red, splashed and striped with carmine and more or less overlaid with a deep purplish bloom. The flesh is white often with a pinkish tinge, fine, crisp, tender, juicy, sub-acid and aromatic. The trees are large, vigorous, upright-spreading, very hardy, productive and healthy. Flowers bloom in mid-season. Fruits about three weeks later than McIntosh.

Hangs Well to Tree

A prominent fruit grower writes in *The Rural New Yorker* as follows: "I visited the Cortland and McIntosh orchard of Mr. William Hotaling on September sixth and he was picking his McIntosh. Exactly four weeks later we were again in the vicinity, and this time the Cortland Apples were just ready to pick. The Cortland Apples were hanging tenaciously to the trees. Under one tree that was carrying between three and four bushels of fruit were lying five or six apples, while other varieties nearby were dropping badly, due to the twenty-mile wind that was whipping through the orchard. The few Cortland Apples that were on the ground had the stems torn out. In other words, the Cortlands that had dropped had been literally torn from the trees by the whipping of the wind."

Our Cortland Trees Budded Direct from Bearing Orchards

Several years ago we decided to propagate this valuable new variety in our nurseries. We were able to secure buds direct from the bearing orchards of Mr. William Hotaling of Kinderhook, N. Y., and Mr. William Hart of Poughkeepsie, N. Y., two of the leading fruit growers in the Hudson Valley. The original trees in the orchards of both Mr. Hotaling and Mr. Hart were secured through the New York State Agricultural Experiment Station and have already borne several good crops of genuine Cortland fruit. We guarantee our Cortland to be absolutely True to Name, as we do all of our other stock. Our Cortland trees are propagated on the best French Seedlings, which insures the very finest root system, trees that will transplant without loss and give most satisfactory results.

FINE CORTLAND TREES

Kelly Brothers Nurseries,
Dansville, N. Y.

Indiana, Pa.,
April 17, 1928.

Gentlemen:

I received all the trees in fine shape and had them planted.

They were the finest Cortland trees I ever saw; in fact, I never saw nicer trees of any kind, excellent root system, beautiful shaped tops and exceptionally clean and healthy in every way. No man could ask for anything better all around.

I wish to congratulate you in being able to put out such stock.

Very truly yours,
J. E. LEWIS.

DELICIOUS DWARF APPLE

Dwarf Apple Trees

THE Dwarf Apple trees come into bearing much earlier than the Standard trees. Their low, broad heads are within reach, so that the fruit can be easily picked. These trees take up so little room that they can be planted in the garden, or even on the lawn, and with care will bear good crops within three or four years. The fruit is of extra high quality. Trees bear very early. We have the following list of best varieties of Dwarf Apples to offer:

Baldwin, Delicious, Duchess, King, McIntosh, Nor. Spy, Red Astrachan, Rome Beauty, R. I. Greening, Stayman's Winesap, Wealthy, Winter Banana, Yellow Transparent.

PRICES OF ALL VARIETIES OF DWARF APPLE TREES

	Each	Ten	Hundred
Largest Size	\$0.80	\$7.00	\$47.50
Medium Size	.70	6.00	37.50
Smaller Size	.60	5.00	27.50

10% Discount on all Cash Orders received on or before March 25th.
After that date 3% Discount on all Cash Orders.

Crab Apples

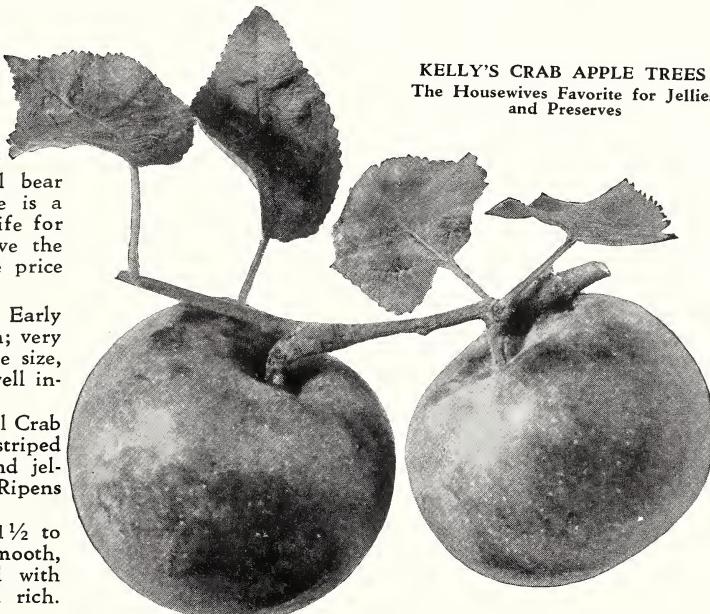

Besides producing much sought after fruit the Crab Apple tree is excellent for ornamental purposes. It will grow in any kind of soil and will bear every year. The Crab Apple is a prime favorite with the housewife for jellies and preserves. We have the following varieties at the same price as the standard apples:

Hyslop—Almost as large as Early Strawberry Apple; deep crimson; very popular on account of its large size, beauty and hardiness. Keeps well into the winter.

Transcendent—The best of all Crab Apples; good size, skin yellow striped with red—fine for preserves and jellies. Tree vigorous grower. Ripens in September.

Whitney—Large, averaging 1½ to 2 inches in diameter; skin smooth, glossy green, striped, splashed with carmine; flesh firm, juicy and rich. Vigorous, handsome.

KELLY'S CRAB APPLE TREES
The Housewives Favorite for Jellies and Preserves

Peach Trees

FOR many years it was the popular opinion that peaches would thrive in only certain sections of the country. We know better now. With one or two exceptions it has been shown that this fruit can be grown at a good profit in every state in the Union. Peaches can be grown on any soil that will produce the average yield of farm crops and are especially adapted to the lighter soils. Careful cultivation and intelligent pruning will work wonders in the production of peaches. If properly cared for, the trees are sure to bring in

a handsome return on your investment. As in other fruits it is imperative, however, that your trees are of the best stock. It is very important that wood growth on peach trees is well ripened and that they have a good and sufficient quality of fibrous roots, so they will withstand the hot sun and drought that may occur after planting. We have a very good stock of hardy trees, with well ripened wood and an excellent root system, and we make the lowest possible price consistent with the quality of the stock.

PRICES OF ALL VARIETIES OF PEACH TREES

Largest Size	1 Year	4 to 5 Ft.	$\frac{9}{16}$ and up	XXX	Each	Ten	Hundred
Medium Size	1 Year	3 to 4 Ft.	$\frac{7}{16}$ to $\frac{9}{16}$	XX	.50	4.00	25.00
Smaller Size	1 Year	2 to 3 Ft.	$\frac{5}{16}$ to $\frac{7}{16}$	X	.40	3.00	20.00

10% Discount on all Cash Orders received on or before March 25th.
After that date 3% Discount on all Cash Orders.

Belle of Georgia—First half of August. Fruit very large and most attractive in color and shape, with a light red cheek; flesh white, firm, delicious—in all ways the quality is fine. Trees grow quick in shapely form and are very strong. Hardy, prolific.

Carman—Middle to end of July. Fruit large and broad, oval shaped, yellowish white; flesh creamy white with red tinge, flavor spicy and good. Especially suited to low, wet land, where other sorts will not thrive. Very hardy, and productive every year. A good shipper, quite satisfactory in commercial orchards.

Chair's Choice—Deep yellow, red cheek; firm; a few days earlier than Smock.

EARLY CRAWFORD

A Popular Variety of Excellent Quality. Extremely Hardy, Bears Very Young and Ripens Early to Command Top Market Prices

Champion—First of August. Fruit large, creamy white, with red cheek; sweet, juicy, very high quality, and splendid. Good shipper. Its fault, if anything, is that it is too tender. Hardy and productive.

Crawford's Early—A large, yellow peach of splendid quality; strong grower and prolific fruitier. No other variety has been so extensively planted. First of September.

Crawford's Late—Superb yellow peach of large size and excellent quality; great bearer. One of the finest late varieties. Last of September.

Elberta—The leader of all peaches and the greatest commercial variety on the market; 50 per cent of the peaches planted are Elberta. In all probability no peach will succeed over so wide a range of territory as this kind. It will thrive where any peach can be grown. A beautiful peach of good quality, not only the best orchard variety but also valuable for planting in the garden. Elberta is hardier in bud than many varieties, therefore, a more uniform cropper. It is large, yellow, with red cheek, juicy and high flavor; flesh yellow, free stone. Season medium early, following quick upon Early Crawford. Early September.

Fitzgerald—Originated in Canada. Fully equal to Crawford's Early in size, quality and color, with a much smaller pit; a very early bearer, often when two years from bud; extra hardy, succeeding in Canada and in Michigan perfectly; fruit large, brilliant yellow with red cheek; ripens after Crawford's Early.

Gold Drop—Large, good quality, hardy; a profitable market sort; follows Late Crawford.

Kelly Bros. Nurseries,
Dansville, N. Y.

Waltham, Mass.,
May 17, 1928.

Gentlemen:

Our stock arrived in very good condition, and we are very much pleased with it.

Wish to thank you for the prompt and courteous service we received from you.

Very truly yours,

N. E. STOCKHAUS.

Peach Trees (Continued)

Greensboro—Large, beautifully colored, bright red over yellow; flesh white; good quality, good commercial sort. July.

Hale—A description will hardly do justice to this fine variety. In size it is one-third to one-half larger than the Alberta and is more highly colored. The skin is deep crimson, smooth, tight, and without fuzz. Flesh is golden yellow, firm, and has a most delicious flavor. The pit separates easily from the flesh. It is exceptionally valuable as a commercial peach owing to its unusual keeping and shipping qualities. Will ship nearly as well as an apple. Fruit ripens about five days before Alberta, but it will hang on the tree longer. Your collection is incomplete without this variety.

Hiley (Hiley Belle)—Is a large, smooth, white peach with a bright red cheek on the sunny side. Resembles Belle of Georgia but is more highly colored. Flesh white with red streaks, fine, rich and juicy. Hiley is of great value as an extremely hardy peach, of best quality, a long keeper, a good shipper, and one which comes at a season when a reliable known peach of good size is necessary to complete the succession of ripening in the modern commercial orchard. August.

Ray—Of good size and has a most attractive red blush of delicate shade. Flesh white, firm and of most excellent quality. Keeps well. A good shipper of fine appearance even after much handling. Trees strong growers, shapely and symmetrical. Old peach orchardists would be surprised to see how quickly they attain good size.

A regular bearer of big crops. Ripens August 10th to 25th.

Rochester—Is in a class by itself because it is the only good sized yellow free-stone peach of fine quality ready for market in the middle of August in the Northern states. The fruit is large, yellow, with a most attractive red blush; juicy and delicious and keeps well; an excellent shipper. Its greater sweetness over other peaches requires only half the usual quantity of sugar in canning. The tree is a strong grower; early and regular bearer of big crops, and absolutely hardy; two weeks ahead of Early Crawford—maturing when highest market price prevails. Market men seek the Rochester peach not only for its large size and beauty, but for the further reason that it is a good shipper.

Salway—Large; deep yellow, red cheek. Flesh yellow, juicy. October.

Smock (Beer's Smock)—This is an old standard variety, highly prized and valuable for either home use or market. It has a beautiful yellow color, and the flesh is firm, juicy and of high flavor. It is a free-stone; ripens very late. Tree is a fine grower and productive. September.

Yellow St. John—Of medium size, orange yellow with a red blush on sunny side; flesh tender, juicy and quality very good. Tree is a strong grower and bears heavy crops every season. Reaches the market at a time when the demand for early fruit is at its height. When properly handled, the best prices can be obtained. Middle August.

Director, Bureau Plant Industry

Pear Trees

THE value of this fruit is just beginning to be appreciated and its cultivation is extending. Compared with apples, there are few really fine pears on the market. If growers would specialize in this fruit they would be well repaid for their efforts, as high prices are always obtainable for choice pears. Our pears are all budded on imported French stock, which gives them the finest root system. We recommend the following varieties:

Anjou—This is one of the best known, most popular and profitable late pears. The tree is a vigorous grower, hardy and prolific. The pears are of large size, green in color, but often yellowing when thoroughly ripe. They are very juicy and luscious and of the best quality. For late fall and very early winter use, we have no better variety. October to January.

Bartlett—Rich golden-yellow when ripe, often with a soft blush; large, thin-skinned; buttery and melting, with a rich musky flavor. Tree a strong grower, bears young and abundantly, but requires careful cultivation to bring it up to its highest excellence. Probably more highly esteemed for canning and shipping than any other. Succeeds best as standard, but does well as dwarf. An old favorite. When planting orchards of standard Bartlett, it is recommended that dwarf Bartlett or dwarf Anjou be used for fillers, since it greatly increases the profit. In planting dwarf pears, they should be set into the ground deeper than the standard pears; the union should be 4 to 5 inches below the surface.

ANJOU

Typical Branch of a Kelly Duchess Pear Tree

Beurre Bosc—Greatly esteemed. A large yellow pear; flesh white, rich and delicious; has long stem which allows it to sway in heavy winds without dropping. The tree is a slow grower, but most productive. Keeps until Christmas.

Clapp's Favorite—Large, fine; pale, lemon-yellow, with brown dots; fine texture, melting, buttery, juicy, with a rich, sweet, delicate, vinous flavor. Tree hardy and very productive. Thrives where other varieties fail.

Duchess D' Angouleme—A most dependable cropper, often fruiting the first season after planting. Fruit large, frequently weighing a pound. A dull greenish yellow, spotted russet, flesh white, rich and good quality. An all round profitable market pear. October to November.

Flemish Beauty—This fine old pear is still one of the hardest and most generally successful over a wide range of country, producing good crops annually of large, handsome fruit that is exceptionally good in quality. September and October.

PRICES OF ALL VARIETIES OF PEAR TREES

Pears (Continued)

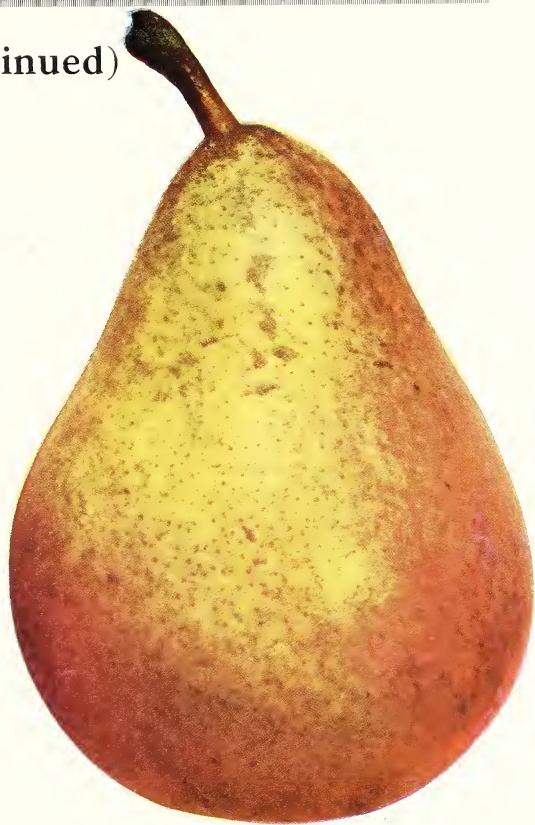

Kieffer—Large to very large, skin yellow, with a light vermillion cheek; flesh brittle, very juicy, with a marked musky aroma; good quality. It is unfortunate that the merits of this fruit have been underestimated from the haste in which it is hurried to market in an immature condition, and often before it has attained the proper size. When allowed to hang upon the trees until the beginning of October, and then carefully ripened in a cool, dark room, there are few pears which are more attractive. Combines extreme juiciness with a sprightly sub-acid flavor and the peculiar aroma of Bartlett. Fruit should be thinned. 90 per cent Kieffer and 10 per cent Le Conte should always be the arrangement, on account of pollinating.

Lawrence—Trees healthy, hardy and very productive. Fruit large; skin yellow, covered with brown spots. Flesh whitish, rich, buttery, and aromatic. One of the quality pears that has great merit for commercial orchards.

Le Conte—Undoubtedly another hybrid from the Chinese Sand Pear. Large, pyriform; smooth, pale yellow, quality good, juicy and pleasant. Tree remarkably vigorous, healthy and free from blight. A prolific bearer and profitable. October.

BARTLETT

CLAPP'S FAVORITE

Louise Bonne de Jersey—Large size, pale green in the shade but overspread with brownish red in the sun; very juicy and melting with a rich and excellent flavor. Good commercial sort. September to October.

Seckel—A beautiful and delicious little pear that is the standard of excellence in its class. One of the richest and highest flavored pears known, always in demand for desserts and luncheons and better known than any pear of its class. The tree makes a somewhat slow but stout and erect growth. September and October.

Sheldon—A large, round, russet and red pear of very rich, fine quality, melting and delicious. Tree vigorous, bears well. October.

Vermont Beauty—Of medium size, roundish, yellow, heavily shaded with carmine; flesh exceedingly fine, sweet and juicy. The tree makes a strong, healthy growth and bears good crops. October.

Wilder—Medium to small, greenish yellow with brownish red cheek; melting, sweet and very pleasant; vigorous grower; good bearer.

Worden-Seckel—This beautiful and delicious pear attracted wide attention when introduced recently. In quality it is rated very high. In size it is much larger than Seckel. It is shaped like Bartlett but is not as large. A tree of this beautiful pear is an object of beauty on the home ground when laden with beautiful specimens. October.

Cherry Trees

BLACK TARTARIAN
The Best Dark Colored Sweet Cherry

Cherry Trees

IN these days of apparent specialized fruit growing, cherries seem to have been neglected. Yet it is safe to say that no fruit will find a more ready market or bring in a larger return on the money invested. The fact that cherry trees can be used for ornamental as well as productive purposes greatly increases their possibilities on the market. Any well-drained soil will be found to be adapted to the sturdy growth of cherry trees. Our cherries are all budded on imported French stocks and

these form a fibrous root which reduces considerably the loss in planting. We believe that no fruit will bring greater profits, as the cherry will bear a fair crop two or three years after planting and requires very little care and attention. We have a good assortment of varieties, but would especially recommend the Large Montmorency for commercial planting, as it bears enormous crops and the canning factories pay a higher price for it than they do for any other sour variety.

PRICES OF ALL VARIETIES OF SWEET AND SOUR CHERRY TREES

SWEET CHERRIES

Black Tartarian—Very large; bright purplish black; half tender; juicy, very rich. Tree a remarkably vigorous and erect grower, and an immense bearer. One of the most popular varieties in all parts of the country. June.

Bing—One of the most delicious sweet cherries grown. Tree very hardy and vigorous, with heavy foliage. It succeeds in the East better than most sweet varieties. Fruit is large, dark brown or black and very fine quality. Bing is a good shipper and should be planted with Lambert for commercial purposes.

Governor Wood—Large, heart-shaped; light yellow, marbled light red, juicy, sweet and rich. Tree vigorous, productive; forms a round head. An old variety that is still a favorite in many regions.

Lambert—One of the largest of all cherries. It is purple-red; firm and rich. Every year sees an enormous crop, and the tree not only grows well, but is proof against insect and fungous attacks. The finest of shippers.

Napoleon or Royal Ann—A beautiful cherry of large size; pale yellow with bright red cheek; flesh firm, juicy and sweet; one of the best for market and canning.

Schmidt's Bigarreau—The fruit is very large size, of a deep mahogany color. The flesh is dark, tender, very juicy, with a fine rich flavor. Fruit grows in clusters. It is an excellent shipper. July.

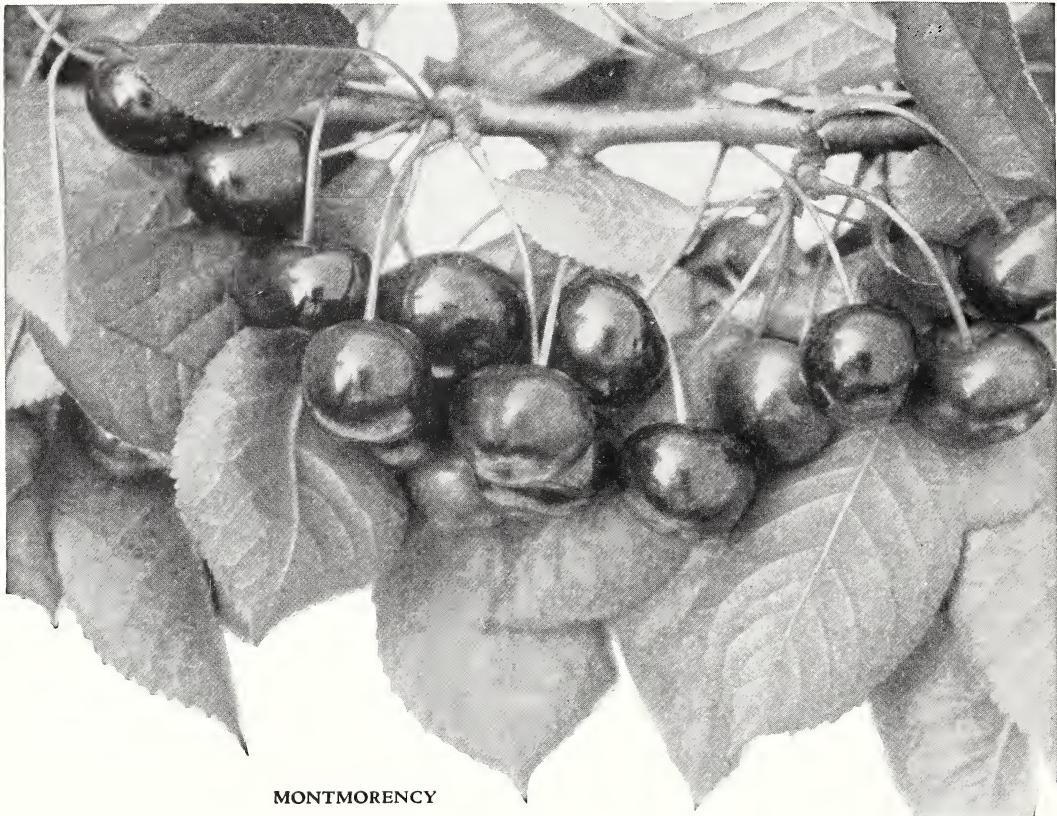

Windsor—Tree upright, vigorous and a rapid grower; fruit large, roundish, oblong; very firm and juicy; flesh pinkish and sometimes streaked; quality very good; a productive bearer; has attracted attention owing to its large size and dark color; almost black. July.

Yellow Spanish—A pale yellow cherry with bright red cheek in the sun. It is one of the best, most beautiful and popular of all of the light colored cherries; vigorous and productive.

XXX XX X
Note the Excellent Root System of Our Different Grades of Cherry Trees

Cherry Trees (Continued)

MONTMORENCY

SOUR CHERRIES

Dyehouse—A hardy and valuable cherry. Unquestionably the earliest cherry, ten days earlier than Richmond, fine quality, its early bearing remarkable as its great hardiness. Has the appearance of being covered with a scarlet cloth, such is the abundance of the fruit. Has the smallest pit of any cherry known; a splendid keeper and free from knots. For tarts, pies and especially for canning, it has no superiors among cherries. June.

Early Richmond—One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in the gardens. The most hardy of all varieties, uninjured by the coldest winters. Tree slender in growth, with a roundish, spreading head, exceedingly productive. Ripens through June. The cherry tree bears almost every year.

English Morello—Fruit large, elongated; almost blackish red when fully ripe; very rich, acid; juicy and good. A splendid pie cherry. Tree very hardy, somewhat smaller than other sorts, but exceedingly productive. This fruit is in great demand by the fruit-juice manufacturers. July.

Large Montmorency—This is the best of all the sour varieties of cherries. There is a greater demand on the market for this cherry than for any other. The trees are the cleanest and best growers and are less subject to disease, less affected by wet weather, and are the best bearers of the best fruit of all other sour varieties. No matter how

unfavorable the season may be, Montmorency can be depended upon for a full crop. The Montmorency is a good shipper, very attractive looking and always brings good prices. The canning factories are always calling for them and want them by the hundreds of tons. The fruit is good-sized, fine flavored and bright, clear red. Fruit ripens 10 days after Early Richmond.

May Duke—This is one of the good old standbys which has been so popular for many years in the past, both in the East and West, where it has been largely planted and where it has rewarded the planter by large crops of profitable fruit. The color of this cherry gradually changes from a bright red to nearly black when fully ripe. The flesh is red, becoming dark purple later; is very juicy and melting, rich, acid and of superior quality. It must remain on the tree until fully ripe in order to develop its best character. Season very early. The tree is very hardy and adapted to all localities.

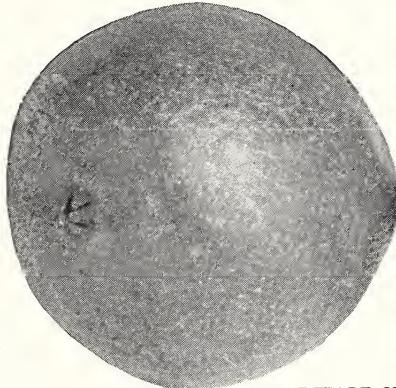

Olivet—A tree of this variety should be in every garden. The fruit is very large, has a shining deep red color; tender, mild sub-acid flavor. Ripens in June.

Ostheime—Large; skin red, dark at maturity; flesh liver-colored; tender, juicy, almost sweet; very good; hardy.

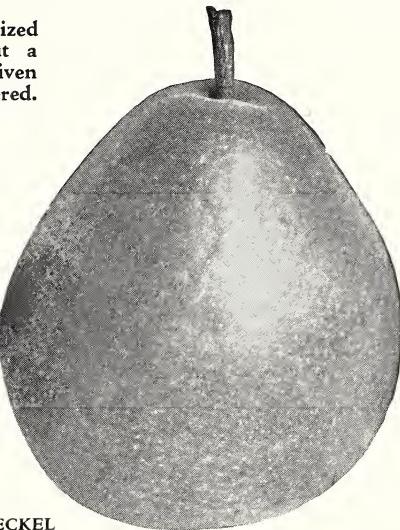

Wragg—Large, roundish, heart-shaped, dark crimson and when fully ripe, black or nearly so; flesh and juice light crimson, firm and good, very productive; one of the hardest and is usually a sure cropper.

Dwarf Pear Trees

Kelly's dwarf trees bear large, full sized fruit the same as standard trees, but a greater number can be planted in a given space and the crop is more easily gathered.

DWARF SECKEL

THE cultivation of dwarf pears is very profitable. The trees are low-headed and the fruit is easily handled and comes into bearing usually the second or third year. Pears are dwarfed by budding on quince stock, and the trees should be planted three inches below the union. All varieties of pear do not give good results as dwarfs. We recommend the following varieties to be good growers and bearers and to give the best satisfaction as dwarfs:

Bartlett, B. D. Anjou, Clapp's Favorite, Duchess, Flemish Beauty, Kieffer, Seckel. (For description of these varieties see Standard Pear.)

Plum Trees

NO other fruit tree, unless it is the cherry, will produce more abundantly than a plum tree. Although they will yield crop after crop despite neglect, plum trees will readily show the result of care and modern methods of fruit growing. The commercial side of plum production has received much attention in late years, but the supply still falls short of the demand. In general, plum trees thrive best in a sandy or clayey soil.

A distance of 16 to 18 feet apart is considered the best for plum trees with the distance increased to 20 feet where a wagon spraying outfit is used. Many varieties of plums produce so abundantly that the best results will be obtainable only by careful thinning. If allowed to grow naturally the trees will be weakened and the quality of the fruit will be inferior. We can recommend to the planter the following varieties:

PRICES OF ALL VARIETIES OF PLUM TREES

Largest Size	2 Year	5 to 7 Ft.	$\frac{3}{4}$ and up	XXX	Each	Ten	Hundred
Medium Size	2 Year	4 to 5 Ft.	$\frac{5}{8}$ to $\frac{3}{4}$	XX	.70	5.50	35.00

10% Discount on all Cash Orders received on or before March 25th.
After that date 3% Discount on all Cash Orders.

EUROPEAN PLUMS

Bradshaw—A very large and fine early plum, dark violet red, juicy and good. Trees erect and vigorous; very productive; valuable for market. The quality is excellent, and it is destined to become one of the most popular of all plums for canning, while its attractive color, good quality and shipping properties will cause it to be sought for as a market variety.

Fellemburg Prune—Dark purple with a dark blue bloom; size medium; oval, pointed and tapering. Flesh juicy and delicious; fine for drying.

German Prune—A valuable plum for dessert, but most esteemed for market and drying or preserving. Fruit long, oval, purple with a thick bloom; flesh firm, sweet and pleasant, separating freely from the stone; moderate growth. A great favorite. A sure market for all you have to sell at very profitable prices.

Geuii—Very large, bluish purple; flesh yellowish green, sweet. Tree hardy and rapid grower.

Grand Duke—One of the best late plums for market; as large as Bradshaw, of same color, entirely free from rot. Last of September.

Imperial Gage—Rather large; oval, greenish; flesh juicy, rich and delicious, parts from the stone. Tree a vigorous grower; very productive and one of the best plums.

Lombard—Medium to large, roundish, oval, dark red, flesh yellow, juicy and pleasant flavor; hardy, popular, nearly always producing a crop; a valuable commercial sort. August.

Monarch—Very large, brilliant; bluish purple; flesh pale golden green; juicy, abundant bearer and begins fruiting young. Free from rot; excellent for market. September.

Kelly Brothers Nurseries,
Dansville, N. Y.

Saegertown, Pa.,
Mar. 10, 1928.

Gentlemen:

Your catalog here and I see you have a very fine selection.

A number of years ago I remember of getting from you the finest lot of Plum trees that I ever saw, and they were strictly True to Name and all right in every way. This is a great satisfaction to one who wants to have his trees right in every respect.

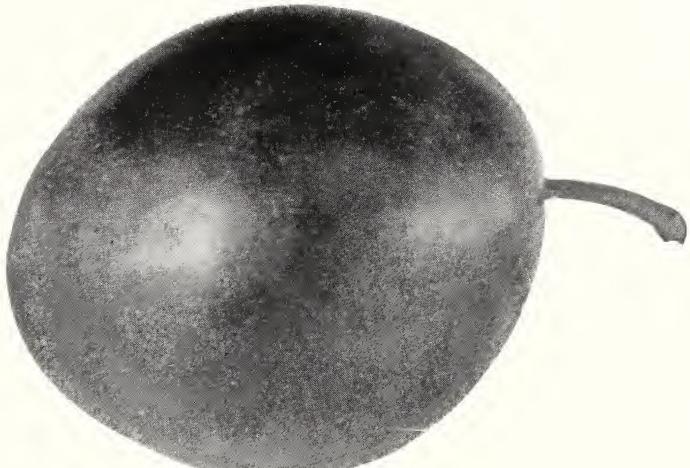

Wishing you every success, I remain,

Yours very truly,

JOHN C. BOYD.

Plums (Continued)

Make sure of a profitable crop of your favorite plums each year by planting Kelly's fine, healthy, hardy trees that are developed in the wonderful soil of the Dansville region.

FELLEMBURG PRUNE

Reine Claude—Large, pale yellow, marked with red, excellent and of fine quality; good bearer; valuable for commercial purposes. Middle of September.

Shipper's Pride—Large and handsome, dark purple; quality fine, juicy and sweet; excellent for canning. September.

Shropshire Damson—One of the favorite Damsons. Fruit oval; tree a good grower and enormously productive; fruit of medium size produced

in thick clusters or groups, dark purple color, esteemed for preserving. October.

Yellow Egg—Golden yellow covered with thick bloom. Flesh golden yellow. Rather juicy. Tree large, very productive. September.

York State Prune is one of the largest, best in quality and most productive of all prunes or plums. Size large; color dark blue, covered with purple blush; flesh yellow and delicious; freestone, ripening the last week in September. It originated in Dansville, N. Y.

Photo shows how a high-grade Kelly Plum Tree bears heavily on the main branches. This is in addition to the branch bending yield throughout the top of the tree.

JAPANESE PLUMS

Abundance—Fruit large, showy, beautiful; amber, turning to a rich, bright cherry color, with a decided white bloom, and highly perfumed. Flesh light yellow, exceedingly juicy and tender, of a delicious sweetness impossible to describe. Stone small and parts readily from flesh. For canning it is of greatest excellence. Its season is very early, ripening in advance of other plums, thus adding to its special value.

Burbank—When properly thinned, the fruit is very large, nearly round and bright; meaty and quite firm, keeping and shipping finely. Tree hardy and vigorous, but sprawling in growth; needs close pruning; enormously productive.

Red June—The best Japan plum, ripening before Abundance. Medium to large; deep vermillion-red, with handsome bloom; flesh light lemon-yellow, firm; moderately juicy; fine quality. Tree upright, spreading, vigorous and hardy; productive.

Satsuma—Large, globular, with sharp point. Color purple and red with bloom; flesh firm, juicy, dark red or blood color, fine quality; pit very small.

Shiro—Medium size, yellow, and very sweet. The best quality of any of the Japan plums. We have fruited it in nursery rows and can recommend it highly for garden planting. September.

Wickson—A sturdy, upright grower; fruit remarkably handsome, deep, maroon-red, covered with white bloom; stone small; flesh fine texture, firm, sugary and delicious; excellent keeper and shipper.

Quince Trees

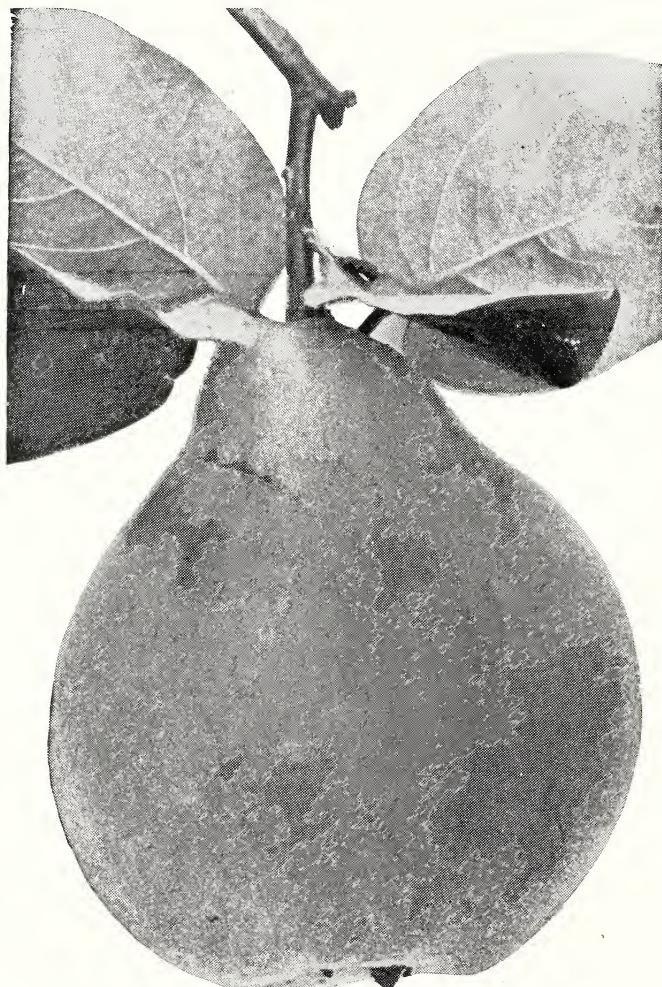

ITS pre-eminence as a fruit for jellies and preserves makes the quince a profitable tree for the fruit grower, the farmer, or any one having even a small garden. The quince tree does not take much room on account of its dwarfish charac-

ter. Any kind of good, rich soil will give good results. It can be grown in bush or tree form. Hardly any family's fruit supply for the winter is complete without the quince. We recommend the following varieties:

PRICES OF ALL VARIETIES OF QUINCE TREES

Largest Size	2 Year	4 to 5 Ft.	$\frac{5}{8}$ and up	XXX	Each	Ten	Hundred
Medium Size	2 Year	3 to 4 Ft.	$\frac{1}{2}$ to $\frac{5}{8}$	XX	.75	6.50	52.50
Smaller Size	2 Year	2 to 3 Ft.	$\frac{5}{8}$ to $\frac{1}{2}$	X	.65	5.50	42.50

After that date 3% Discount on all Cash Orders.

ORANGE QUINCE

Bourgeat—Bears at an early age, producing large crops of exceedingly large and handsome fruit, of a rich golden color. While it ripens soon after the Orange it keeps until mid-winter, or it is ready to use at once on maturity. It has proved to be free from leaf blight, the leaves keeping green until killed by frost.

Champion—Fruit very large, fair and handsome. Tree very handsome, surpassing other varieties in this respect, bears abundantly while young; flesh cooks as tender as an apple and without hard spots and cores; flavor delicate, imparting an exquisite quince taste and odor to any fruit with which it is cooked.

Meech's Prolific—The most prolific of all known varieties; ripens between the Orange and Champion. Bears very early, usually a full crop at three years; quality unsurpassed and size large.

Orange—Popular, extensively cultivated, reliable and satisfactory. The name was given in an attempt to do justice to its most delicious flavor. Roundish, bright golden yellow, very large, fine grained, fine quality. Best for cooking. Firm, will stand shipping.

Rea's Mammoth—Large, rich golden yellow; flesh cooks as tender as the apple and without hard spots or cores; flavor delicate, imparting an exquisite quince taste and odor to any fruit with which it is cooked. Sure to ripen even in Northern latitude. Very hardy and productive. We regard it the best of all quinces. October.

Wayne County Orange Quince

A FEW years ago it came to our attention that the Orange Quince, as generally grown by nurserymen, was not the very best strain of Orange Quince; in fact, it was inferior in many ways to what it should be with reference to flavor, productiveness and size. We at once began to look around to locate some good strain of the real old-fashioned Orange Quince.

We had heard of the Orange Quince orchard of Mr. Fred Grover, Pultneyville, Wayne Co., N. Y. (near Williamson), which is located in the heart of one of the greatest fruit belts in the United States. After thorough personal investigation, covering a period of three successive years, each of which saw enormous crops of this luscious golden yellow fruit, we decided we had found the very best quince. Mr. Grover told us that he had lived on this same farm for over thirty years, and that every year, without exception, this orchard had yielded an enormous crop. In fact, it is the most productive of all quinces.

We then made arrangements with Mr. Grover to secure scions from this orchard. These scions were taken from this orchard by us personally, and we now offer quince trees propagated in our nurseries from this magnificent strain.

The Wayne County Orange Quince is very

WAYNE COUNTY ORANGE QUINCE

large, fine-grained, almost round in shape, and of bright golden yellow color. It is from a third to one-half larger than any other quince we have ever seen. Being very firm it will stand handling and shipping. It is of such delicious flavor that we could not attempt to do justice to its high quality by a mere catalog description. Ripens from September first to fifteenth. As the size, appearance and quality are so much better than that of the ordinary quinces, Mr. Grover has always had a great demand for his crop, and has always sold his quinces

at a figure far higher than the ruling market price. The tree itself is very thrifty and bears at an early age.

Mrs. Grover says she remembers the trees bearing when they were very small; in fact, this variety has fruited in our nurseries at one and two years old. With all sincerity we can recommend this variety for commercial purposes, or for home use. You will make no mistake in planting this most productive, highest quality quince. Be sure to get the genuine Wayne County Orange Quince direct from Kelly Bros., the introducers. Each tree has attached our Trade Mark Label. On one side of the label is printed: "Wayne County Orange Quince"; on the reverse side, "Kelly Bros., Dansville, N. Y."

WHOLE ROOT TREES—UPLAND GROWN—BRING RESULTS

Our trees are propagated on whole root, imported seedlings, and not by grafting on piece roots. This insures the heavy, fibrous root system which is so essential to first-class trees. We plant seedlings on upland ground where there is good air drainage, and thus we are certain that the trees will be perfectly hardy, and absolutely free from injury of any kind. They are full of vitality and are the trees for you—Mr. Planter.

RECEIVED IN FINE CONDITION

Feb. 20, 1927.

Kelly Brothers Nurseries,
Dansville, N. Y.
Gentlemen:

The McIntosh Red Apple trees I bought of you nine years ago have borne for two years and are a fine strain, having the real purple glow to them. They are all True to Name.

Yours very truly,
WESLEY ADAMS,
Master N. H. State Grange.

Apricots

THIS is a rich, delicious fruit, coming between cherries and peaches. It is very much like the peach in outward appearance, but like the plum in quality and texture. The apricot ripens a month or more before the best early peaches come in, which explains the reason for the great demand and prevailing high prices. It should be planted in deep, rich soil; and care should be taken to know that the sub-soil as well as the top-soil is dry.

Aside from its value as a fresh fruit, the apricot has a fixed place on the list of fruits for canning and drying, for which purposes vast quantities are used every year. There is always a market for apricots and the planter should have no fear of over-production. Our stock of apricots for this season is exceptionally fine and we make a very attractive price on them.

PRICES OF ALL VARIETIES OF APRICOT TREES

Largest Size	1 Year	4 to 5 Ft.	$\frac{9}{16}$ and up	XXX	Each	Ten	Hundred
Medium Size	1 Year	3 to 4 Ft.	$\frac{7}{16}$ to $\frac{9}{16}$	XX	.65	5.00	30.00

10% Discount on all Cash Orders received on or before March 25th.				After that date 3% Discount on all Cash Orders.			

Alexander—Fruit yellow, flecked with red, very beautiful and delicious. July.

Alexis—Very hardy; an abundant bearer; yellow, with red cheek; large; slightly acid, rich and luscious.

Budd—Medium to large; light orange with blush on sunny side; flesh sweet, juicy, with flavor of the peach; hardy and productive.

Gibb—Tree hardy, grows symmetrical, produc-

tive. Fruit medium yellowish, sub-acid, juicy and rich. The best early variety, ripening soon after strawberries.

Harris—A hardy English sort. Medium size; oblong, orange; good quality; very early. The best variety for Eastern culture.

Moorpark—One of the largest, orange with red cheek; firm, juicy, with a rich flavor; very productive. August.

Nut Trees

The necessity for the importation of large quantities of nuts each year has awakened American agriculturists to the possibilities in producing nuts. Oftentimes the trees will thrive on soil not adapted to profitable fruit growing.

American Sweet Chestnut—This is the well-known native variety with which nearly everyone is familiar. It is a stately tree, attaining great height when mature. It is beautifully symmetrical and when in blossom is as handsome as a tree can be. It bears a nut of good quality and seldom fails to produce a good crop. Aside from their crop value, all the chestnuts are specially desirable for shade purposes and for ornamental planting. Trees 4 to 5 ft. in height, \$1.00 each, \$9.00 per 10.

Black Walnut—This species is a common and stately forest tree in the Middle and Western states; grows from forty to sixty feet high; has an open, spreading head and is rapid in growth; produces large crops of nuts with rough, hard shell containing rich, oily kernels of fine flavor. Trees 5 to 6 ft., 90c each; 4 to 5 ft., 70c each.

Butternut—A fine native tree producing a large, longish nut, which is prized for its sweet, oily, nutritious kernel. Price of Butternut trees, 4 to 5 ft., 75c each.

Chestnut, Spanish—A handsome round-headed tree, producing abundantly, very large nuts that find a ready market at good prices. Price of Spanish Chestnut trees, 4 to 5 ft., \$1.00 each.

English Walnut—A fine, lofty-growing tree, with handsome spreading head; produces large crops of thin-shelled, delicious nuts which are always in demand at good prices. Trees 3 to 4 ft., \$1.50 each.

We know that healthy trees, free from disease and absolutely True to Name, are the only trees a nurseryman can deliver and remain long in business. We earnestly request your most searching inquiry as to our reputation in this respect.

ENGLISH WALNUT

Special Bargains in Fruit Trees

MANY planters prefer to plant the smaller size trees, as it reduces the cost of investment. In all cases they report success in planting this grade, as the fibers of the roots are small and readily adhere to the ground and make a rapid and very satisfactory growth the first year. A few buyers of fruit trees have an idea that the smaller trees are poor trees and are not fit to plant. This is a mistake, as each one of our smaller trees is a good, clean, straight, healthy little tree and is first class in every respect according to grade. These small trees are well rooted and mature, and we recommend them most highly to the planter. We have a good stock of apple, peach, pear, cherry, and offer them at these special low prices:

"TRUE TO NAME"

Rushville, N. Y.
Dec. 17th, 1927

Kelly Bros. Nurseries,
Dansville, N. Y.

Gentlemen:

I am going to write you in regard to trees we have purchased from your firm in the past.

Twelve years ago we set 5 acres of Apple trees, also a number of Pear and Plum trees. Every tree has borne fruit and is True to Name. The R. I. Greening, Baldwin, Rome Beauty and McIntosh began to bear several years ago and we have had more or less of a crop every year. This season we had the best crop of all, one row of thirteen McIntosh trees netting us \$225.00. We are sorry we did not have more of this variety.

We shall get more trees in the Spring and they surely will be Kelly trees.

Yours truly,

L. C. WILLIAMS

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

I just want to tell you that the nursery stock which I rece'ved from you a few days ago, consisting of Cherry, Plum, Apple and Peach trees, is in every respect entirely satisfactory. I never before saw such a fine lot of trees, and I wish to say that I appreciate getting them. I am sure every tree will grow and bear fruit.

Very truly yours,

ABRAM N. HIXSON, M. D.

Grand Ledge, Mich.,
April 20, 1928.

Satisfied Customers Are Our Best Advertisements

Here are a very few of the many unsolicited letters we have received from our customers, testifying as to the quality of our stock, prompt attention in filling orders, and fair dealing. READ THEM:

Mt. Clemens, Mich.,
May 23, 1927.

Kelly Bros.,
Dansville, N. Y.

Gentlemen:

It is a pleasure to do business with you, and I will send you another order next season. Many thanks for extra fine stock.

Yours very truly,
F. M. PREVOST.

Sussex, N. J.,
Dec. 19, 1927.

Kelly Bros. Nurseries,
Dansville, N. Y.

Gentlemen:

I should like to acknowledge receipt of the R. I. Greening Apple trees.

Thanking you for your promptness in this matter, and assuring you that the trees were very fine ones, I am,

Very truly yours,
A. COAN,
Teacher of Agriculture,
Sussex Public Schools.

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

Trees received in A-1 condition and they are excellent. Have received trees from other nurseries this spring of some varieties and age, but trees from Kelly Brothers appear to be very much better, and were received in much better condition. I should have a fine orchard.

This spring's planting will make a total of 850 trees received from you.

Yours truly,
JAMES A. MOONEY.

Kelly Brothers,
Dansville, N. Y.

Dear Sirs:

The Peach trees arrived in good condition, and I am writing you to thank you for them. The general excellence of your stock and your generous way of making good in occasional failure make your customers anxious to recommend your nurseries.

Very truly yours,
WINIFRED A. HOPE.

Kelly Bros. Nurseries,
Dansville, N. Y.,

Gentlemen:

My trees arrived yesterday in good condition. The roots are fine, also the tops, and I am much pleased with them.

Respectfully yours,
CHARLES C. DAMON.

"RESULTS COUNT"

Forest Hill Orchards,
Temple, N. H.
February 23, 1927

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

The trees received from you were head and shoulders above the trees received from other nurseries. The difference in nursery stock is expressed in cents, but the difference in the bearing trees is expressed in dollars, and in every case one cent saved in buying trees was a dollar lost on the bearing tree if good stock is not received to begin with.

You may be assured you will receive all of my future orders, as I have been planting your trees for several years and they have given the very best satisfaction.

Yours truly,
A. F. ROCKWOOD

Gentlemen:

The fruit trees arrived yesterday in splendid condition, and I am really very pleased with them.

Hoping to send you another order, I am,

Yours truly,
JOHN H. NICHOLS.

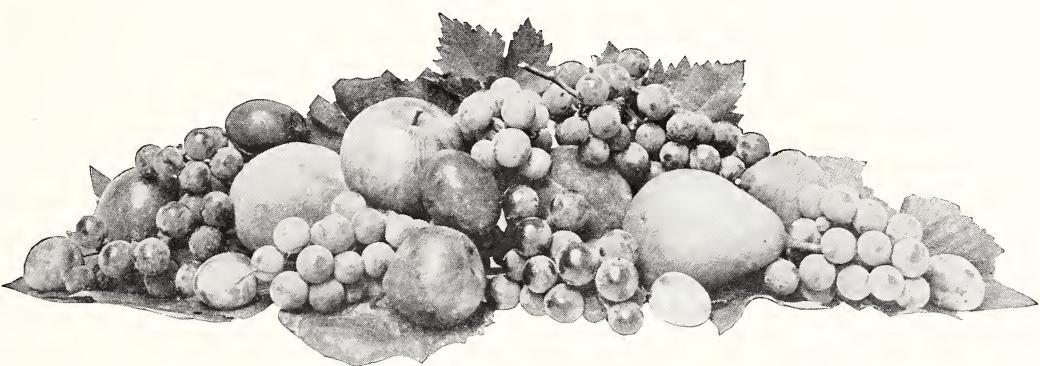

Kelly Brothers Nurseries,
Dansville, N. Y.

Kelsey, N. Y.,
May 1, 1928.

Gentlemen:

My shipment of trees arrived in good condition and have been set out. We were very much pleased with the good size and low price of the stock. They arrived in very healthy condition.

Yours very truly,
KOSTANTY FRANSKEVICZ.

Our References

AS to our responsibility and reliability we ask our prospective customers to inquire of Dun's or Bradstreet's Commercial Agencies; Merchants and Farmers National Bank, Dansville, N. Y.; The Citizen's Bank, Dansville, N. Y.; or of any person whose letter appears in this catalog.

AN EXPRESSION FROM OUR HOME PEOPLE

We, the undersigned, wish to state that we have known the Kelly Brothers for many years and have watched the steady increase in their business until today they are one of the largest growers of fruit trees in the United States. We believe that their success is due to their thorough knowledge of the business and square dealing with their customers, and it is with pleasure that we recommend them to the planter and fruit grower.

WE STRIVE TO AVOID MISTAKES

But in the event that any nursery stock sold by us should prove untrue to name under which it is sold, we hereby agree, on proper proof of such untruth to name, to replace the original order or to refund the purchase price. Except for such liability, and in respect to all nursery stock sold by us, we give no warranty, express or implied, as to description, quality, growth, productiveness or any other matter.

Kansas (Black)—One of the best of the early ripening blackcaps; the berries are large and showy. Canes are of strong growth, very hardy and prolific, with tough, healthy, clean foliage.

Loudon (Red)—The Loudon new red raspberry ripens with the earliest and hangs late. Very productive and a good shipper.

Marlboro (Red)—A very profitable, early market variety with large, light crimson fruits, of good size and flavor. The crop covers a period of four or five weeks in ripening.

Plum Farmer (Black)—It is covered with a grayish bloom, like the bloom on a grape, which makes it very attractive in appearance. It ripens very early and quickly. The fruit is enormously large.

St. Regis (Everbearing)—A new acquisition to the red raspberry family. Fruit commences to ripen with the earliest and continues on young canes until October. Color bright crimson.

Raspberries

A READY market can always be found for raspberries. When well cared for they are sure to return a good profit. A patch of raspberries should be renewed about once in five years, as by that time the quality of the berries deteriorates and the fruit becomes small. The plants should be well manured and cultivated at frequent intervals. We offer the following varieties:

Prices of Strong, Healthy Plants

Twenty-five	Hundred	Thousand
\$1.00	\$3.50	\$30.00

Columbian (Purple)—A strong grower, unexcelled for productiveness and desirable for canning. Fruit very large, purplish color, rather soft, rich, sprightly flavor.

Cumberland (Black)—The largest of all blackcaps. A healthy, vigorous grower, throwing up stout, stocky, well-branched canes that produce immense crops of magnificent berries. Fruit very large, firm, quality good. Mid-season.

Cuthbert (Red)—Medium to large, crimson; hardy and prolific. The most reliable sort. Fine for market or garden. Succeeds well over a large range of territory both North and South. Sufficiently firm so that the fruit ships well and of such good quality as to make it one of the best for home use.

Golden Queen (Yellow)—Very large, hardy, vigorous and productive. No garden should be without it. Canes hardy, of strongest growth.

Gregg (Black)—Of great size, of fine quality; very productive and hardy. It takes the same position among blackcaps as Cuthbert among the red sorts.

Herbert (Red)—Fruit is large, bright to deep red. It is a very strong grower and very productive. Cane strong and vigorous. Season begins a few days before Cuthbert.

The motoring public will come right to your door and pay the top price for crates of fine berries like these fresh from the picking.

Blackberries

FRUIT growers as a rule regard the blackberry as the most profitable of the several varieties of berries. Blackberries thrive best on fertile loam, although clay and sandy soils also

produce good results. The rows should be about six feet apart, with each plant approximately two feet apart in the row. We have selected the following varieties as the best:

Prices of All Varieties of Blackberries

	Twenty-five	Hundred	Thousand
Strong, well-rooted Plants	\$1.50	\$4.50	\$35.00

10% Discount on all Cash Orders received on or before March 25th. After that date 3% Discount on all Cash Orders.

Blower—An upright, mammoth grower; very hardy and enormously productive; large, glossy, firm and luscious berry, extra good everywhere.

Fruit may be picked continuously from July to October, ripening in great quantities in August and in abundance in September.

Eldorado—The hardest and sweetest blackberry. Very vigorous and hardy. Berries are very large, jet black, borne in large clusters and ripen well together; are very sweet, melting, pleasing to the taste, have no hard core, and keep eight to ten days.

Erie—Fruit very large, excellent quality. There is no other berry that rivals it in combining hardiness, large size, earliness and productiveness.

Mersereau—Remarkably strong grower, upright, producing stout, stocky canes. An enormous producer of extra-size berries, which are brilliant black and retain their color; extra quality, sweet, rich and melting, without core. Ripens very early.

Rathbun—A strong, erect grower with strong stem, branching freely; will root from tip of branches like a raspberry. Hardy, having endured twenty degrees below zero and produced a good crop. Forms a neat, compact bush, four to five feet high, producing its immense fruit abundantly. Fruit is sweet and luscious without hard core, of extra high flavor, jet black, small seeds, firm enough to ship and handle well. Very large size.

Snyder—Abundant bearer; berries of medium size; fruit ripens early and is sweet and juicy. Canes very hardy even in extremely cold climates. You won't go wrong in planting this variety, as it will be found most satisfactory both as a home and market berry.

Wilson's Early—Very large size, oblong oval, black, quite firm, rich, sweet and good; ripens early and matures its fruit rapidly; retains its color well after picking.

ERIE

GOOD PACKING

72 Manton St., Pawtucket, R. I.,
Nov. 16, 1927.

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

I want to thank you for the very nice specimens of fruit trees, ornamental stock, vines and shrubs. They were all very fine.

Every detail in the packing was carefully carried out and the shipment arrived in fine condition, packed perfectly.

Yours very truly,
RANDOLPH KEPPIE.

TREES O. K.

Sangerville, Me.,
June 4, 1928.

Kelly Bros. Nurseries,
Dansville, N. Y.

Gentlemen:

The trees I ordered of you recently came to hand O. K., and I wish to say that they are the finest trees I ever saw and the price is certainly "rock bottom."

I am glad that I am a reader of the old New England Homestead, for I saw your ad in that paper and knew at once that you were thoroughly reliable.

With best wishes, I am,
Sincerely yours,
C. R. WAUGH.

Strawberries

B EING practically the first fruit of its kind on the market, strawberries are ready sellers and can be grown at a good profit. They will thrive in any good garden soil. Plants should

be set one foot apart in the row, with the rows two feet apart. Beds should be renewed every third year, as it has been found that more than two crops to a planting are not profitable.

A Garden of Kelly's Corsican Strawberries Will Produce Delicious Berries for the Home and Market.

PRICES OF ALL VARIETIES OF STRAWBERRIES

Except Fall Bearing

Twenty-five	Hundred	Thousand
\$1.00	\$2.50	\$12.00

NOTE—Strawberry plants are always shipped by express or parcel post separate from balance of order. About May 1st.

Brandywine—A good market berry; medium to large; dark scarlet, firm and somewhat acid; a good bearer and does well in clay soil.

Corsican—It is a great strawberry; it is the biggest berry; it is the brightest and best in color; it is a great yielder and producer; and the foliage is exceedingly vigorous and leathery, resisting fungus, drought, weed and even neglect of cultivation.

Haverland—Exceedingly productive; fruit large and very fine; one of the most popular and well tested varieties; withstands drought better than most kinds; color light, season early.

Jessie—Especially valuable for garden. Large, firm and solid; excellent quality; productive.

Marshall—Very large, dark crimson; firm and of excellent quality; plant vigorous and productive; one of the best varieties for home use or market.

Michel's Early—One of the earliest varieties grown. The plant is a very robust grower, strong and healthy; one of the best of the early fertilizers, as it blossoms early and late.

Sample—Late, of large size and yields enormous quantities of high quality bright red berries. Standard shipping variety.

Senator Dunlap—A sturdy plant and heavy cropper of best quality berries, with clean, healthy foliage which has no tendency to rust. The berries are very large, roundish conical, regular with slight neck. In color, they are glossy crimson, with the meat firm and solid, deep crimson throughout and good in quality.

Wilson—The best berry for canning. This is an old well-thought-of variety that has always given satisfaction. One of the very best berries for flavor and quality. We recommend this variety to you.

Fall-Bearing Strawberries

Twenty-five	Hundred
Prices	\$7.50

Productive—This is the strongest growing plant of all the fall-bearing strawberries. It is a seedling of the Autumn and Pan-American. The plants are very large and heavy-rooted, producing a phenomenal crop of medium to large fruits. The young plants are produced in good quantities. This variety has very prominent seeds, is very firm and a good shipper.

Superb—The plants of the Superb are of good, average size, are strong growers and stand the winters best of all kinds tested. The fruit is very large, roundish, dark-colored, glossy, attractive and smooth. It has the finest flavor.

Bound Brook, N. J.,
Feb. 2, 1928.

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

Allow me to thank you for the stock which I have received. It was very satisfactory indeed. I may need more of it, as I find it is the best I can buy and I will remember you whenever I may be in the market again.

Yours respectfully,
GEORGE B. RANDOLPH.

Read Statement of Professor French on Page 5.

Garden Roots

Asparagus Roots

ASPARAGUS is one of the most profitable crops grown. It is in great demand in all markets, always selling for high prices. The demand is much greater than the supply, as asparagus has not been so extensively planted as many other farm products. It will thrive in all localities and on any soil that will produce general farm crops. To have it real early, it should be planted on light soil. The sprouts are not usually cut for the market until the second year after planting, except to mow down the canes in the fall or spring. Plant from 4 to 5 inches deep, covering with only 3 inches of soil at first, and cover the remainder as the plants grow. The rows should be 5 feet apart, with the plants set 2 feet apart in the row. Broadcast about 5 bushels of salt and 300 pounds of nitrate of soda to the acre in March and give it a good top dressing of stable manure in November. The profits from asparagus are wonderful. It is ready for market in April or May, and the income derived from it is especially appreciated at this time of the year. It is successfully planted during March, April and May.

Price, Strong, Healthy Plants

\$1.00 per 25; \$2.50 per 100; \$12.50 per 1000

VARIETIES

Conover's Colossal—A standard variety of large size, tender and excellent quality. This variety is known everywhere. You will get good satisfaction out of a bed of asparagus.

Palmetto—A very early variety, even, regular size and of excellent quality. It has been tested both North and South and has proven entirely satisfactory.

Washington—New rust-resisting variety. Exceptional rust resistance due to unusually vigorous constitution; extraordinary yielding qualities; large size of individual stalks and their rapid development to cutting size, which rapid growth stands for tenderness, are the outstanding characteristics of this new variety. The shoots are straight, of dark green color, with a heavy purple overtone. They are always tight and do not open until well above the ground.

Horseradish

Will stand a great deal of hardship and exist in soil year after year. Plant in deep, rich, cool soil. The yield will vary according to the soil and treatment.

Price, Strong Sets

50c per 10; \$3.00 per 100; \$15.00 per 1000

Rhubarb

(Pie Plant)

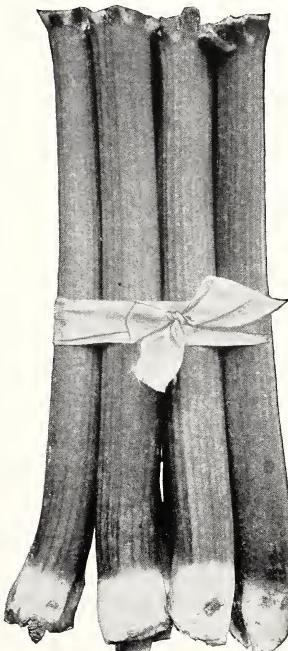

Rhubarb is the earliest available material in the spring for fresh pies and sauce. Every family should have a few rhubarb roots, for there is nothing in the fruit or vegetable line that is so beneficial to the human system in the spring months. Set plants 12 to 18 inches apart in rows.

Early Scarlet—Rather small, early and good.

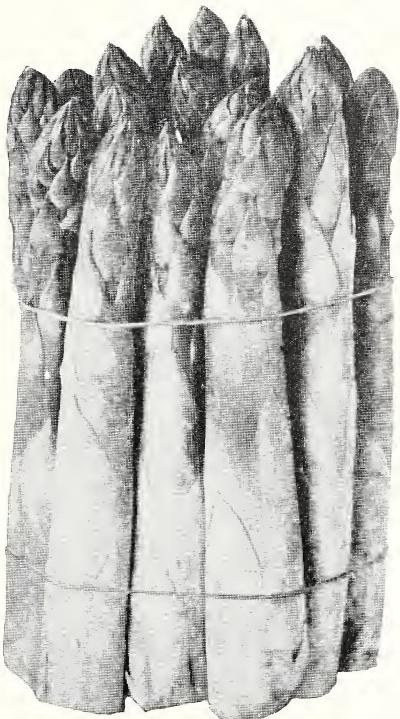

Linnaeus—Large, early, tender and fine.

Prices, Strong, 2 Year Plants

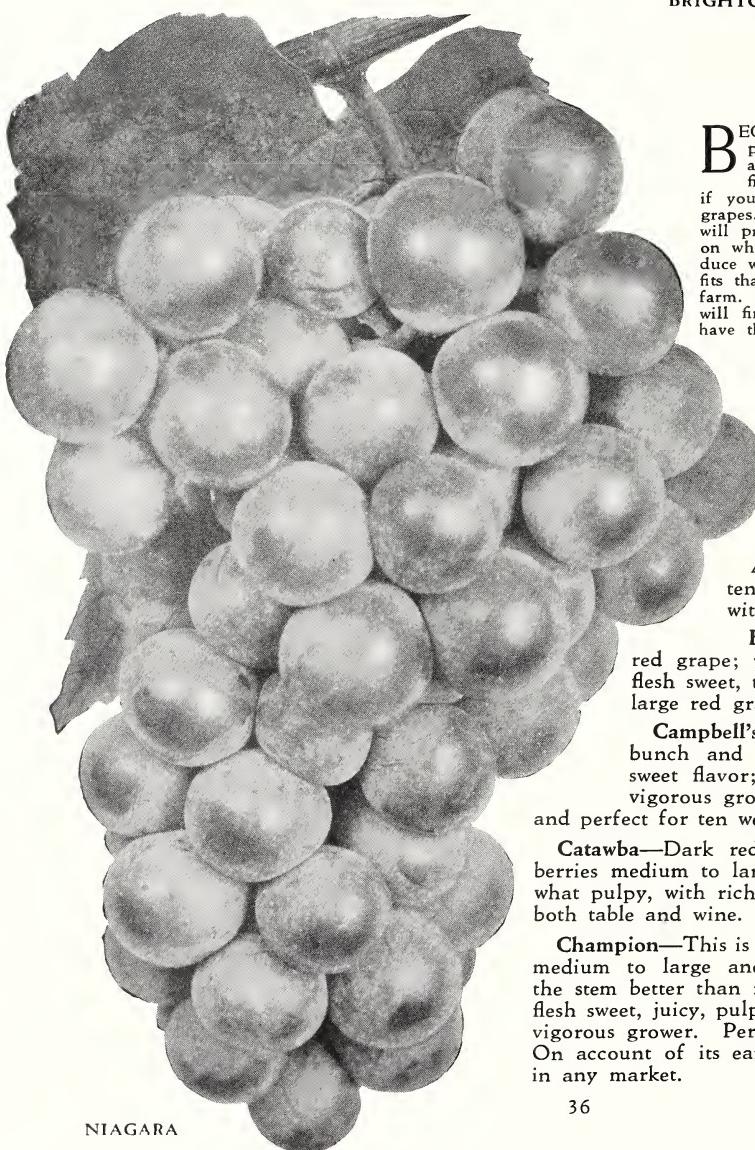

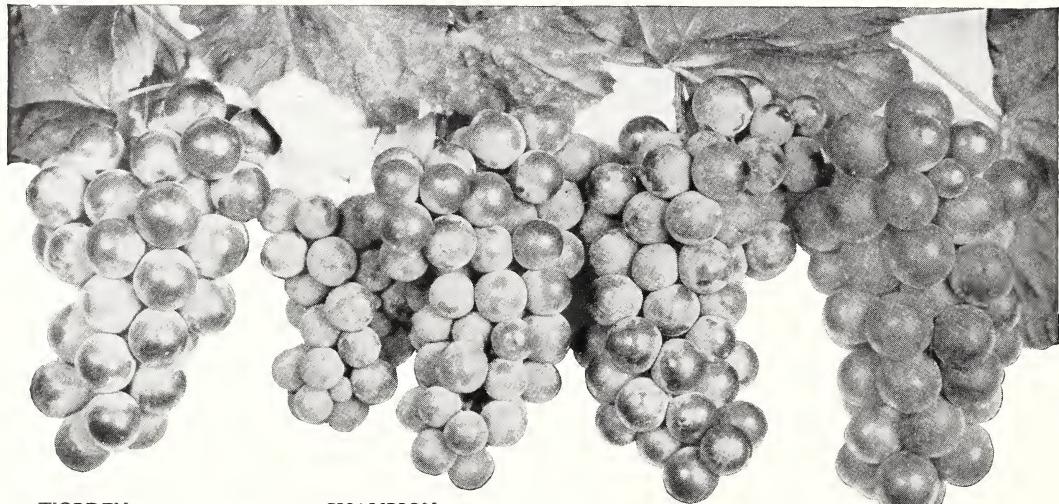

20c each; \$1.50 per 10; \$10.00 per 100

EARLY SCARLET RHUBARB

WASHINGTON ASPARAGUS

Grapes

BECAUSE of their adaptability to fit any place where there is a bit of soil, grapes are often a source of considerable profit. In fact, some fruit growers say that if you can plant only one fruit, let that be grapes. They require little care, and as a rule will produce most abundantly. Rocky hillsides on which no other fruit would thrive will produce wonderful crops of grapes and show profits that will overshadow any other part of the farm. Good grapes command high prices and will find a ready market in any locality. We have the following varieties in our stock:

PRICES OF GRAPES, 2 YEAR No. 1 VINES (Except as Noted)

	Each	10	100
2 Yr. No. 1	\$0.25	\$2.00	\$18.50

CONCORD GRAPES

	Each	10	100
2 Yr. No. 1	\$0.15	\$1.25	\$8.00

Agawam—Good red variety; flesh tender and juicy, good bearer. Ripens with Concord.

Brighton—A large, delicious, sweet red grape; vine thrifty and a strong grower; flesh sweet, tender and very juicy. Best of all large red grapes.

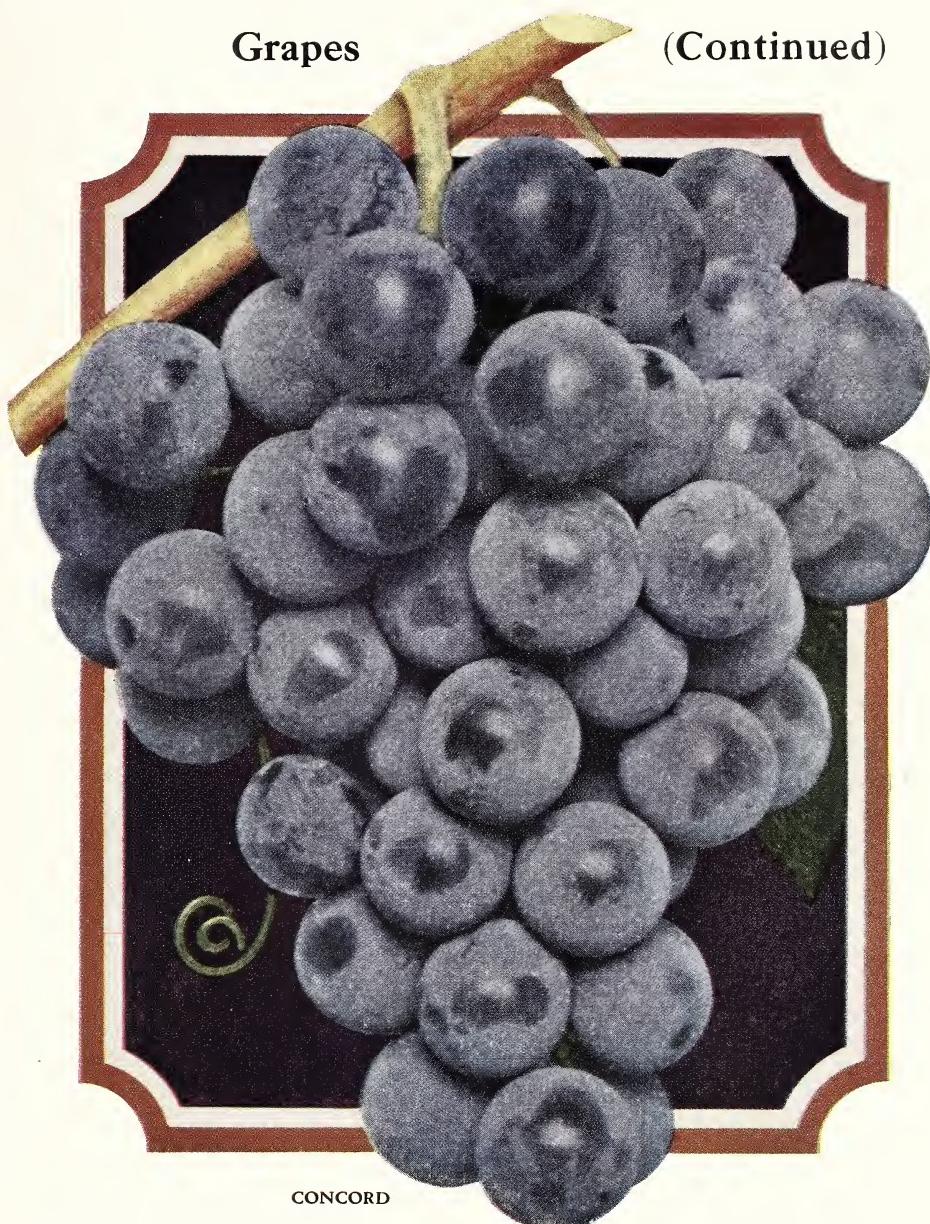

Campbell's Early—Black, with purple bloom; bunch and berries large. Juicy, with rich, sweet flavor; almost seedless. Hardy and of vigorous growth. Fruit hangs on vines sound and perfect for ten weeks or more after ripening.

Catawba—Dark red when fully ripe. Bunch large, berries medium to large, skin thick, tough; flesh somewhat pulpy, with rich vinous flavor, of best quality for both table and wine.

Champion—This is an extra early black grape. Bunch medium to large and compact. Berries adhering to the stem better than many other varieties. Skin thick, flesh sweet, juicy, pulpy and good flavor. Vine a rank, vigorous grower. Perfectly hardy and very productive. On account of its earliness always sells for high price in any market.

Grapes

(Continued)

CONCORD

Concord—The well-known black grape. Can always be depended on to fruit heavily. Succeeds over a large extent of country. Popular for market.

Delaware—One of the finest grapes. Bunches small, compact, shouldered; berries rather small, round; skin thin, light red; flesh juicy, with an exceedingly sweet and delicious flavor.

Diamond White—The leading early white grape. White, with rich yellow tinge; juicy, few seeds, almost free from pulp, excellent quality; above medium size, adheres firmly to stem.

Moore's Early—Bunch and berry large, with a blue bloom; quality better than Concord. Its size and earliness render it desirable.

Niagara White—Popular everywhere. Bunch

very large and handsome, often shouldered, compact; berries large, round; skin thin, tough, does not crack and carries well; has not much pulp when fully ripe, melting, sweet, with a flavor and aroma peculiarly its own, and agreeable to most tastes; ripens with Concord, sometimes a little earlier. Vine very vigorous and productive, succeeding well in all sections.

Pocklington—Berries large, golden yellow; sweet and tender with little pulp. Thoroughly hardy and healthy. Ripens after Concord.

Worden—Possesses most of the good qualities of Concord and lacks some of the bad ones. Differs chiefly in having larger berries and bunches. Better in quality and five to ten days earlier.

Ornamental Department

WELL-KEPT grounds, which necessarily include fine shade trees, ornamental, flowering shrubs, vines and roses, are naturally a great source of pleasure to a property owner.

They also greatly enhance the value of property. A relatively small amount invested in ornamentals will bring a big return should you wish to dispose of your prop-

erty. Nor does it require a big outlay of money to make your property beautiful by such ornamentation. The trees and shrubs, etc., of course should not be planted haphazardly. If you do not know just how to go about the matter you can easily obtain competent advice. We take the same care with our ornamental stock that we do with our fruit stock. That means that it is the best.

CATALPA BUNGEII ARE USED EFFECTIVELY HERE

Ornamental Trees

American Elm—The most admired of all American trees. Very attractive in any suitable location, entirely hardy and easily transplanted. There are more elm trees planted along our streets than any other variety. This is on account of its dense green foliage, which spreads out from overhead, covering a suitable space of ground in proportion to the size of the tree, which makes it the finest shade tree in the world. Price, 6 to 8 feet, \$1.00 each; \$8.00 per 10. 8 to 10 feet, \$1.50 each; \$12.50 per 10.

American Linden (Basswood)—A rapid-growing, large sized, beautiful native tree with large, shining cordate leaves, stately. Growing 60 to 80 feet tall. Its beautiful white flowers appear in July and yield a delicate perfume. Valuable for its beautiful white wood. Price, 6 to 8 feet, \$1.50 each. 8 to 10 feet, \$2.00 each.

Ash-Leaved Maple (Box Elder)—A fine, rapid-growing variety, with handsome, light green foliage and spreading head; very hardy; desirable for street planting and succeeds in many sections where other varieties do not thrive. Price, 6 to 8 feet, \$1.00 each. 8 to 10 feet, \$1.50 each.

Kelly Brothers,
Dansville, N. Y.

Framingham, Mass.,
April 18, 1928.

Gentlemen:

I am very sorry to have delayed writing you to thank you for the fine stock you sent me. Every tree is perfect, and many of my neighbors have been inquiring where I secured such fine stock. I can highly recommend you to them.

Yours respectfully,
ROBERT HESSEL.

Kelly Brothers Nurseries,
Dansville, N. Y.

Chepachet, R. I.,
March 21, 1928.

Gentlemen:

We have an orchard of one hundred trees which we received from you. It has made a wonderful growth, and many people have complimented on the excellent quality of the trees.

Respectfully yours,
THOMAS B. RICCITELLI.

Ornamental Trees (Continued)

NORWAY MAPLE

Bechtel's Flowering Crab—Makes a medium sized tree, perfectly hardy, succeeds well in all soils. When in bloom appears to be covered with delicate pink, double small roses of delicious fragrance. See page 55 of this catalog for full description. Price, 2 to 3 feet, \$1.00 each; \$7.50 per 10. 3 to 4 feet, \$1.25 each; \$10.00 per 10.

Catalpa Bungei (Umbrella Tree)—Grafted on stems 6 to 8 feet high, it makes an umbrella-shaped top without pruning. Perfectly hardy, and flourishes in almost all soils and climates. Leaves large, glossy, heart-shaped, deep green, lying like shingles on a roof; always making a symmetrical head. One of the most unique trees; desirable for lawn, park and cemetery planting. Price, 6 to 8 feet, \$2.00 each. 8 to 10 feet, \$3.00 each.

Catalpa Speciosa—One of the most rapid growers. Valuable for timber, fence posts, railroad ties, etc., possessing wonderful durability. Large, heart-shaped, downy leaves and compound panicles of white flowers, tinged with violet and dotted with purple and yellow. Very ornamental and useful. Price, 6 to 8 feet, 75c each; \$6.50 per 10. 8 to 10 feet, \$1.00 each; \$8.50 per 10.

Cut-Leaved Weeping Birch—One of the most elegant of all weeping or pendulous trees. Its tall, slender, yet vigorous growth, graceful drooping habit, silvery white bark and delicately cut foliage presents a combination of attractive characteristics rarely met with in a single tree. Price, 5 to 6 feet, \$3.00 each.

Horse Chestnut, White Flowering—The well-known European species; very handsome; has magnificent spikes of white flowers. As a lawn tree or for the street it has no superior. Price, 5 to 6 feet, \$2.00 each; \$17.50 per 10.

Mountain Ash—A handsome small tree with pinnate foliage and loaded in late summer with big clusters of bright red berries. Price, 5 to 6 feet, \$1.50 each.

Mulberry, Downing—This tree is not alone valuable for the large, refreshing berries it bears, but is very handsome as a lawn or street tree. This should be in every yard or garden. Price, 6 to 8 feet, \$1.00 each; \$7.50 per 10.

Norway Maple—The most beautiful of all shade trees. Perfect in form with deep green foliage. It is a vigorous grower, free from disease, and holds its color until late in the fall. Growth is fast. Branches and foliage are thick and compact. For lining the sides of lanes and roads, to protect the house from sun and weather, for shade, for beauty and satisfaction, it cannot be excelled. Price, 8 to 10 feet, \$3.00 each; \$27.50 per 10. 10 to 12 feet, \$4.00 each; \$37.50 per 10.

Oriental Plane—Leaves heart-shaped at base, deeply cut. Is among our tallest trees, growing rapidly into massive proportions. Hardy and free from disease. It does well in cities and near the seashore and is not affected by insects. Price, 8 to 10 feet, \$2.00 each; \$17.50 per 10.

Greenfield, Mass.,
June 29, 1928.

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

I am writing you to let you know that the trees we bought from you were one hundred per cent satisfactory. We have not lost one.

Thanking you very much for your good service, I am,

Yours truly,

MRS. CHARLES FARMER.

AMERICAN ELM

Ornamental Trees (Continued)

CUT-LEAVED WEEPING BIRCH

Poplar, Carolina—A very rapid-growing soft-wooded tree, resembling the cottonwood somewhat, but has a larger leaf and much thicker and more spreading top, denser and heavier foliage. It is being extensively planted in the cities and towns throughout the United States on account of its rapid growth, its symmetry and ability to endure gas and smoke. Perfectly hardy. It is free from cotton, which is so disagreeable in the cottonwood. Price, 6 to 8 feet, 40c each; \$3.50 per 10; \$30.00 per 100. 8 to 10 feet, 50c each; \$4.50 per 10; \$35.00 per 100. 10 to 12 feet, 75c each; \$6.50 per 10; \$50.00 per 100.

Poplar, Lombardy—A tall, spire-like tree, used for screens and formal planting. Fast-growing, distinctly ornamental and beautiful. Price, 8 to 10 feet, \$1.00 each; \$8.50 per 10; \$60.00 per 100.

Silver-Leaved Maple—Foliage bright green above, silvery underneath. Form of growth spreading. Grows very large. Price, 8 to 10 feet, \$1.25 each; \$10.00 for 10.

Tea's Weeping Mulberry—The most graceful and hardy weeping tree in existence. Forms a perfect shaped head, with long, slender, willowy branches, drooping to the ground. Price, 5 ft., \$2.50 each.

Wier's Cut-Leaved Maple—A beautiful form, with deeply cleft and divided leaves; branches pendulous, often sweeping the ground. Price, 6 to 8 feet, \$1.50 each; \$12.50 for 10.

Hardy Climbing Vines

Ampelopsis Veitchii (Boston Ivy)—For covering buildings of brick and stone; clings tightly to the smoothest surface. Bright green leaves, changing to brilliant coloring in fall. 60c each.

Chinese Purple Wistaria—Beautiful popular species, with racemes of pale lilac flowers borne in great profusion in May. Graceful climber for training on porches or arbors. Stems grow quite large, climb high and twine tightly. Growth very rapid. 60c each.

Chinese White Wistaria—In all respects similar to the species, except in color of the flowers, which are white and borne in great profusion, making a splendid show. 60c each.

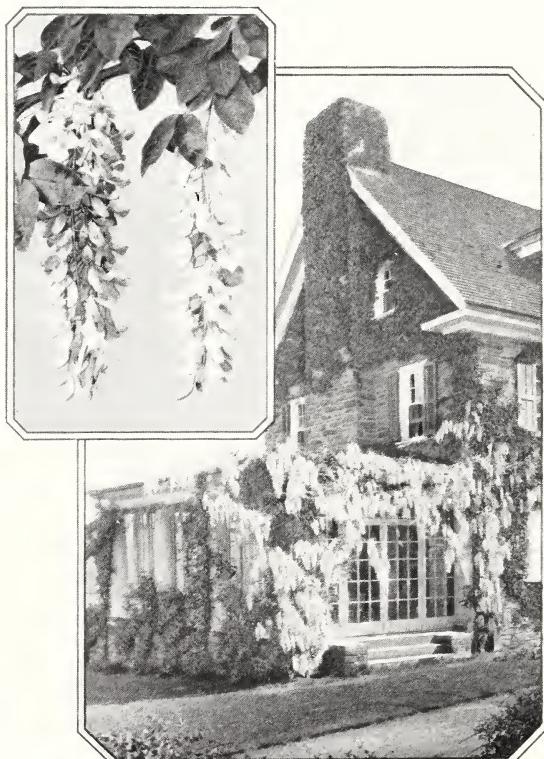

Clematis Henryii—Single, white Clematis; very large, fine flowers; grows rapidly; blooms freely. \$1.00 each.

Clematis Jackmani—Single. Very large; deep purple; forms a perfect mass of richest bloom. \$1.00 each.

Clematis Paniculata (Sweet-scented Japan Clematis)—Flowers medium size, fragrant, pure white, borne in immense sheets in September. 60c each.

Dutchman's Pipe (Birthwort)—Large, heart-shaped leaves and quaint, pipe-shaped green flowers. \$1.00 each.

Hall's Japan Honeysuckle—Flowers white, bloom from July until winter. 50c each.

Evergreens

EVERGREENS are the aristocrats of the home grounds. No attempt is made to proclaim extravagantly the uses and beauty of the conifers, but knowing the plants as we do, with their faults and virtues, there is not a group of plants that holds for its admirers quite the charm that the evergreens do.

'Tis true they have no flowers, but did you ever think, the blossoms are only with us a few days while the foliage is evident for months? There is no time of the year, summer, fall or winter, that evergreens are not pretty. They are on the job 365 days of the year. In landscape work they have no parallel and you should use them generously.

SIZE AND QUALITY

When buying ornamental stock be sure to note carefully the specifications as to grade. The ones we offer are two year, strong No. 1, and are far superior to small size stock, sometimes offered by others at a few cents less.

American Arbor Vitae—Much used for hedges, screens, singly on lawns, and in tubs for porches, etc. It is a handsome little tree, and if allowed to grow naturally will be quite tall and pyramid-shaped. Can be trimmed and kept in any form and height. In the summer the foliage is bright green above, yellowish beneath, and when winter comes this changes to the richest tones of brown and bronze. Price, 18 to 24 inches, \$1.00 each; \$9.00 for 10. 2 to 3 feet, \$1.50 each; \$12.50 for 10.

Boxwood—This old-fashioned variety is a native of England, where it has been grown for centuries. Its neat, dense, waxy foliage has secured many admirers. They are well adapted to small places and can be used with splendid effect as shrubs for the lawn. For decorative purposes, both summer and winter. Price, 18 to 24 inches, \$2.00 each.

Irish Juniper—Junipers are handsome evergreens. Always neat and clean. This variety grows exceptionally slim and column-like. The

EVERGREEN READY FOR SHIPMENT

Above is a cut showing the way of our evergreens are balled and tied with burlap ready for shipment. This method keeps the roots in perfect condition and insures excellent transplanting results.

branches grow almost straight up, and a 7 or 8-foot tree will not be more than a foot and a half thick. Price, 2 to 3 feet, \$3.00 each; \$27.50 for 10.

Norway Spruce—A lofty, elegant tree of perfect pyramidal habit, remarkably elegant and rich. As it gets age, has fine, graceful, pendulous branches. It is exceedingly picturesque and beautiful. Very popular and should be largely planted. One of the best evergreens for hedges. Price, 2 to 3 feet, \$1.50 each; \$12.50 per 10.

There is real joy in the possession of good Evergreens. For foundation planting they reign supreme over all landscape material. Color, height, form and adaptability with the all year around colorful foliage.

Note Our Special Discount on Orders Received Before March 25th.

Flowering Shrubs

Prices of all Flowering Shrubs
(Except as Noted)

2½ to 3 Feet, 2 Year, Strong Bushes

Each	Ten
\$0.45	\$4.00

Common Purple Lilac (*Syringa Vulgaris*) — Similar to white except that the twigs are a little more slender and the bloom is a pinkish-purple; a most profuse bloomer.

Common White Lilac (*Syringa Vulgaris Alba*) — Stocky, strong grower and exceedingly hardy. The bloom is in large white clusters and very fragrant. Thrives well in all localities.

Deutzia, Double-flowering (*D. Cre-nata flore pleno*) — Flowers double white, tinged with rose. One of the most desirable flowering shrubs in cultivation.

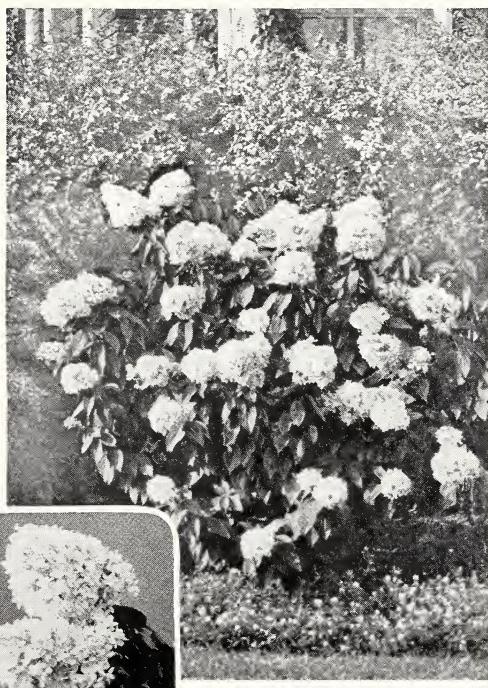

Deutzia Gracilis (Slender Branched Deutzia) — A dwarf variety well adapted to planting in cemetery lots and small lawns. It blossoms in June; the flowers are white.

Deutzia, Pride of Rochester — A new variety. Blooms in May, double, white tinted with rose on the edge. It excels in size of flowers, profusion of bloom and vigorous growth.

Double Altheas (Rose of Sharon) — Unsurpassed by any hardy shrubs for freedom of bloom. From mid-summer until frost, when few

SPIRAEA VAN HOUTTEI IN FULL BLOOM

HYDRANGEA P. G.

other shrubs are in bloom, the Althea blossoms freely. Grows 4 to 6 feet; large foliage and very large flowers; hardy. Easiest culture, most beautiful for hedges. Can supply double varieties in these colors: Purple, Red, White, Pink.

Forsythia (*F. Viridissima*) — A fine hardy shrub. Leaves and bark deep green. Flowers deep yellow, very early in spring.

Golden Glow or Cone Flower — Among the most valuable hardy plants, growing from 1½ to 7 feet in height, producing showy golden yellow flowers. Very free flowering.

Golden-Leaved Syringa (*Aurea*) — A very pretty plant of medium size, with golden yellow foliage. It retains its color the entire season and is valuable for creating pleasing and striking contrasts with both green and purple-leaved shrubs.

Hydrangea Paniculata (*Grandiflora*) — A grand and showy shrub which gives a splendid effect in a border or bed, singly or massed. The colors of the flowers change as the season advances. In spring they are the pink and white of youth, while by the time autumn comes they have reached the bronze of old age. Flowers in large clusters.

Hydrangea P. G. Tree Form — Same as bush, but grown in tree form with single stem, very desirable. \$1.00 each.

Hydrangea Snowball Everblooming — This new hydrangea is the most beautiful hardy flowering shrub introduced in recent years. The plant is very graceful with large trusses of beautifully formed flowers of dazzling whiteness, rendering this a plant of peerless beauty. It seems to thrive in various soils, and when fully exposed to the sun as well as in partial shade. The profusion of bloom of this new hydrangea is very unusual.

Flowering Shrubs (Continued)

NEW EVERBLOOMING BUTTERFLY BUSH

New Everblooming Butterfly Bush (*Buddleia Variabilis Magnifica*)—Several years ago this was imported from Europe. The name BUTTERFLY BUSH was applied to it because it seems to attract butterflies in large numbers, not alone the common little yellow species of butterfly, but also the large and gorgeously colored butterflies that swarm about it as though vying with it in brilliancy of color. This shrub from a young plant set out either in the spring or fall, will mature to full size the first summer, producing a handsome bush, which the first year often attains a height of four feet. It produces long, graceful stems, which terminate in tapering panicles of beautiful lilac-covered flowers that are of miniature size and borne by the hundreds on a flower head which is frequently ten inches long. A single plant the first season will throw out as many as fifty flower spikes, which increase greatly in number during succeeding years. It generally commences to flower in June and continues each season until severe frosts nip it.

Snowball (*Viburnum*) — A well-known favorite shrub, with globular clusters of white flowers, blooming the latter part of May. This good

old early and sure-flowering shrub is planted perhaps more extensively than any other.

Spirea Anthony Waterer (Dwarf Crimson Spirea)—A most beautiful variety of Bumalda. In habit of growth it is the same as its parent. The flowers are crimson in the bud and when first open, fading afterwards to a deep pink. It blooms about the close of June; is useful for edging, planting in masses, or as a single specimen where a low, bushy shrub is required.

Spirea Callosa Rosea—Has large panicles of deep rosy blossoms; grows freely; blooms nearly all summer.

Spirea Prunifolia—A very beautiful variety, flowers white and double. A very profuse bloomer in May. Foliage turns a very beautiful brown color in autumn. Hardy and desirable.

Spirea Van Houttei—Finest of the spireas, giving a most graceful appearance even when out of bloom. The flowers are pure white and borne in dense clusters along the whole length of the branches, often weighing them to the ground. One of the finest ornamental shrubs. Excellent as a single lawn plant, or for grouping with other shrubs; also a fine hedge plant.

Syringa (Lemoinei Erectus)—A charming variety of upright growth. Flowers small, yellowish white, fragrant, more clustered than the older sorts, completely covering the bush.

Weigela Candida—The very best of all white flowering weigelas. Flowers pure white and produced in great profusion in June; continues to bloom during the entire summer.

Weigela D. Eva Rathke—Fine variety. Rich, deep, scarlet blossoms which follow a week after most other varieties.

Weigela Rosea Nana Variegata (Dwarf)—Leaves margined creamy white. Flowers pink.

White Fringe—A popular and much admired shrub of moderate growth and rounded form with large, dark green, glossy leaves, and drooping panicles of beautiful white fringe-like flowers.

DEUTZIA, PRIDE OF ROCHESTER

Read Statement of Professor French on Page 5.

Direct From Grower to Planter

Flowering Shrubs (Continued)

Hardy Phlox

THIS is one of the most useful varieties for summer decoration, the colors varying from pure white to deep crimson and purple. They are not at all particular as to soil and are exceedingly hardy. Once planted, they require no further attention for several years, but it is advisable to renew them about every fourth or fifth year.

The flowering period is from the early part of July to the middle of September and they grow to a height varying from one to three and even four feet. If the first blossom spikes are cut as soon as over, a second crop of blossoms extending until late in the fall may be expected.

Recent improvements have greatly increased the size of the heads and of the individual flowers, in fact, no flower has been more wonderfully improved in recent years.

For brilliant, bold color, the Phlox are almost indispensable and the great range of colors offer many possibilities. Our collection contains the finest of the new introductions. The colors we offer are very beautiful and striking and the individual blossoms are, in many cases, two or three times the size of the older Phlox.

Following is a list of varieties of Phlox we can furnish.

PRICES OF ALL VARIETIES OF PHLOX

Strong, 2-Year, Field Grown Plants	Each	Ten
	\$0.25	\$2.00

LaVague—An improvement over older varieties of similar color, with immense conical heads borne in great profusion. Warm mauve with emphatic carmine eye, giving a general effect of lilac.

Thor—A very beautiful shade of deep salmon-pink, suffused and overlaid with a scarlet glow, aniline-red eye.

Compte—A very beautiful dark purple variety.

R. P. Struthers—Rich flame color, will not streak or fade. One of the very best varieties.

Miss Lingard—Purest white, pale pink eye.

Most graceful panicles.

Mrs. Jenkins—Pure white, immense panicles, free bloomer, large individual flowers.

Kelly Brothers Nurseries,
Dansville, N. Y.

Stratford, Conn..
May 4, 1928.

Gentlemen:

We wish to thank you for the fine Shrubs and Grape Vines, also Phlox and Peony which we received from you yesterday. We could not ask for better stock, and we are looking forward to a fine display in the near future, the plants were so large and thrifty. We certainly feel very grateful to you.

Very truly yours,

MRS. FREDERICK W. WILCOXSON.

BORDER EFFECT OF HARDY PHLOX

Herbaceous Peonies

	Each	Ten
Strong Clumps	\$0.45	\$4.00

A noble flower, almost rivaling the rose in brilliancy of color and perfection of bloom. The first point in its favor is hardiness. In the severest climate the plants require no other protection than that which they afford themselves. Freedom from all diseases and insects is an important argument in favor of their cultivation. Each succeeding year adds to their size and beauty. No other flower is so well adapted for large, showy bouquets. The peony may be planted either singly on the lawn or in borders. It flowers early in June. Our collection has been made with great care and includes the best and most distinct varieties.

Duchess de Nemours—Large and full—the most nearly pure white.

Eugene Verdier—An excellent cutting sort, with broad, full flowers without noticeable guard petals. White, evenly suffused shell-pink.

Festiva Maxima—About the largest and undoubtedly the most popular peony of them all. High built flowers borne on long, stiff stems; the purest white, inner petals slightly tipped carmine.

Louis Van Houtte—Large blooms, very double, bright crimson.

FESTIVA MAXIMA PEONY

"The Rudder," West Barnstable, Mass., April 30, 1927.

Kelly Bros., Dansville, N. Y.

Gentlemen:

My order was received today in fine condition, and you surely have sent me some very fine looking specimens of trees and shrubs.

I know you are very square with your business dealings with me and that your stock is O. K.

Yours very truly,
CHARLES H. KING.

Glorify your garden by planting Kelly's colorful Peonies, either along the border or in clumps.

Queen Victoria—The broad guard petals are a pretty blush-white; center white, slightly edged pink.

Rubra Triumphans—Early. A satiny-finished, intensely rich crimson. Sweetly fragrant.

Souvenir de l' Exposition Universelle—Clear rose color. Fragrant.

HE HAS BOUGHT NURSERY STOCK FOR FIFTY YEARS

Boston, Mass., May 1, 1927.

Kelly Brothers' Nurseries, Dansville, N. Y.

Gentlemen: I received your letter saying that you could not fill my last small order. It is clearly through your own doings that this has occurred.

Fifty years ago I used to visit Rochester, Geneva and other nursery centers to buy nursery stock. They were all good people to deal with and at times I made some heavy purchases, but in all my dealings I have never met any people who seemed so well to exemplify the essentials of sound and successful business as you people. You like and insist upon having good stock, and you follow this up by also insisting that the receivers of your plants should treat them with that good sense and care which alone can insure a successful and profitable result. Following up these lines builds up a patronage that takes your entire output and clamors for more.

Today you show added good sense by not attempting to fill incoming orders with stock grown by others, but simply stop until another season.

Please accept my best wishes and believe me,

Sincerely yours,

JAMES H. BOWDITCH, 903 Tremont Bldg.

Hedges

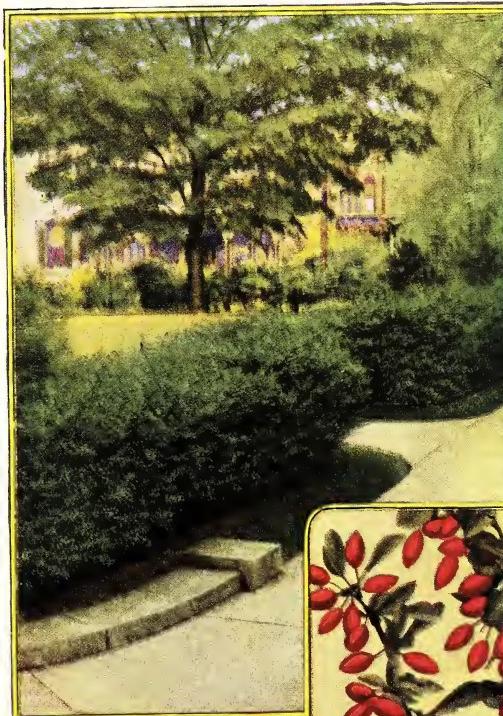

California Privet—A vigorous growing variety, of fine habit, thick, glossy, nearly evergreen leaves. Of all ornamental hedge-plants this is the most highly prized. If cut to the ground one or two years after planting, it makes a very thick hedge right from the bottom, sending up many strong shoots. The leaves are a rich green, and will remain on the plants up to Christmas, and if they are a little sheltered they will keep green almost all winter.

STRONG PLANTS, 18 to 24 IN.

\$1.00 per ten.
\$5.00 per hundred.
\$45.00 per thousand.

STRONG PLANTS, 2 to 3 FEET

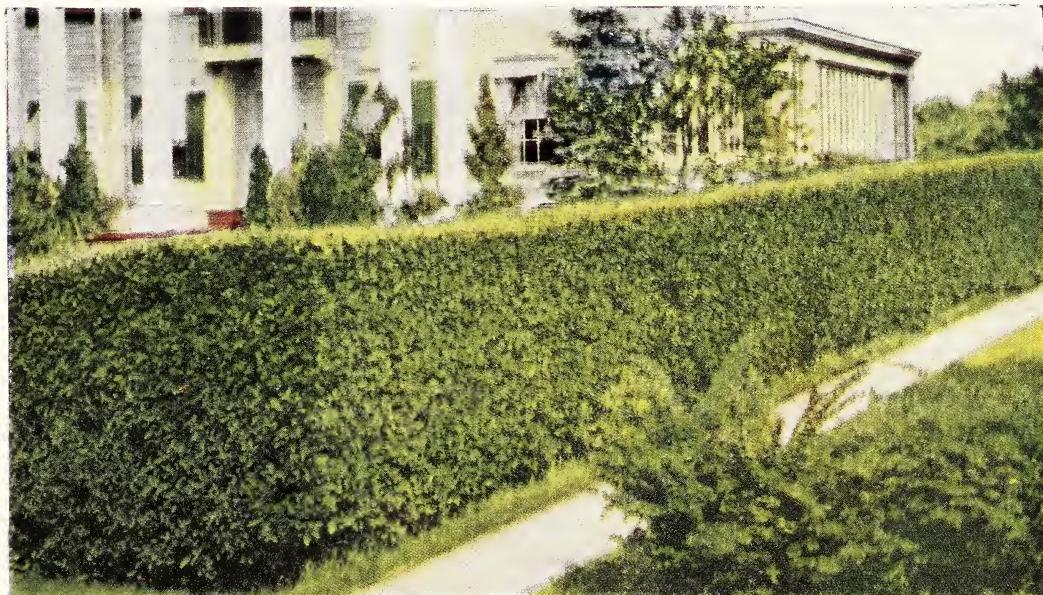

\$1.25 per ten.
\$7.00 per hundred.
\$60.00 per thousand.

BARBERRY THUNBERGII

Barberry Thunbergii—A shrub of marked excellence on account of its bright green foliage which changes to brilliant colors in the fall, and its bright scarlet berries, which are very conspicuous throughout the winter. Their habit is dwarf and regular spreading. Grows well in the shade

and extensively used in landscape work. Very hardy, has never been known to winter-kill. It bears the shears well and makes a dense hedge. Strong plants, 12 to 18 inches, 30c each; \$2.50 per 10; \$20.00 per 100. Strong plants, 18 to 24 inches, 40c each; \$3.50 per 10; \$30.00 per 100.

CALIFORNIA PRIVET

1. Pink Killarney
2. Sunburst
3. White Killarney
4. Butterfly
5. Red Radiance
6. Columbia

Prices, All Varieties, 2 Year, Strong Bushes (Except as Noted) Each Ten
\$0.65 \$6.00

American Beauty (H. P.)—Flowers very large, of beautiful form and very double. Color a deep rich rose. Fragrance delightful, resembling La France or the old-fashioned Damask Rose; each shoot produces a bud.

Butterfly (H. T.)—Bright pink shading to apricot and gold. Blossoms are large and very beautiful. Very perfect bloomer.

Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

Please accept my thanks for the Rose bushes sent. I found them A-1 and satisfactory in every way.

Sincerely yours,
CHARLES E. DAVIS.

157 Pretoria Ave.,
Ottawa, Ont., Canada.
May 7, 1928.

Roses

HERE is perhaps no plant or flower so generally cultivated today as the rose. Its wonderful beauty and fragrance make it the most popular of flowers. For extensive grounds, small lawns, porch trellis or hedges, roses are used with charming effects. Many persons think it difficult to grow roses, but such is not the case; good soil and a little care will insure fine, hardy plants and beautiful blossoms. We have an exceptionally fine lot of roses to offer this season, all No. 1, hardy field grown, two-year-old bushes; budded and on their own roots.

Difference in Class of Roses

Although not generally understood, it is well known by rose specialists that roses come under two classes, Hybrid Perpetual and Hybrid Tea. The Hybrid Tea, or everbloomer, blooms the entire summer. The Hybrid Perpetual, while it

blooms profusely during its season, is not a continual bloomer. (In the description of varieties of roses the abbreviation H. P. denotes Hybrid Perpetual and H. T. Hybrid Tea.)

Planting and Care of Roses

Roses should be planted in good, rich soil. Dig the hole deep enough so that it can be set in the ground about two inches below where it was budded. That will prevent suckers from growing up from the natural root. Do not trim the root off too severely, but cut the tops off about eight inches above the top of the ground. Pack good, rich soil thoroughly around the roots, being careful not to let any compost come in contact with the roots. Keep the top of the earth thoroughly worked around the bushes the entire season. Each following spring they should be pruned ten to twelve inches. Always use a pruning shears, as a knife has a tendency of loosening them from the earth.

Each Ten

Columbia (H. T.)—A new rose that has proved to be one of the finest of outdoor pink roses. The color is glowing pink. Plant is strong and sturdy and almost thornless; heavy, luxuriant foliage. Very free-flowering. We recommend Columbia very highly.

Roses (Continued)

Frau Karl Druschki (Sometimes called Snow Queen) (H. P.)—A wonderful rose—fine, large, free-flowering, hardy, white. Extraordinarily strong-growing, branching freely. Foliage large, of heavy texture, but the glory is in its flowers, which are immense, and produced with great freedom during the whole season—hundreds of magnificent blooms, full, very deep, and double, and of splendid substance. Petals broad, long and saucer-shaped. Buds egg-shaped, long and pointed. Pure, snow-white, without a tinge of yellow, pink or any other color. This great rose is listed by some as Hybrid Tea, as it possesses some of that strain.

General Jacqueminot (H. P.)—The leading rose. Deep, brilliant shaded crimson, with large petals, globular with high center. A well-known favorite—one of the best and planted by all who plant roses.

Gruss an Teplitz (H. T.)—The color is brightest scarlet, shading to deep, rich, velvety crimson. It is very fragrant, the freest grower and most profuse bloomer. The mass of color produced is wonderful and the foliage is extremely beautiful, all the younger growth being a bronzy plum-color. A queen among scarlet bedders.

LOS ANGELES

Killarney Pink (H. T.)—A vigorous growing Hybrid Tea of recent introduction, with so many good points in its favor that it has become a standard variety. Its long, pointed buds, excellent substance and delicious odor recommend it to every lover of the rose. Color flesh pink, shaded with white and suffused pale pink.

Killarney White (H. T.)—Identical with Killarney Pink in size, shape and fragrance, but pure white.

Lady Ashtown (H. T.)—Deep carmine-pink, shading to yellow at base of petals. Flowers large, full, high-centered; continuous bloomer; a good rose always recognizable by its beautiful recurved petals.

LaFrance (H. T.)—This is probably the most popular rose in cultivation. Both buds and flowers are of lovely form and grand size, exceedingly sweet. Color fine peach-blossom, elegant, double with rosy flesh. Begins to bloom very small, and continues bearing by freezing weather.

T.)—One of the grandest and most American origin ever put on the market. Flowers large and continuous, in color a flame pink, toned with coral and shaded with translucent gold at the base of the petals.

MRS. AARON WARD

Roses (Continued)

Mrs. Aaron Ward (H. T.)—It is distinctly different from any other yellow rose, being a coppery orange in the opening bud, golden orange when partly developed and pinkish fawn when fully open. The flowers are of splendid form and size. Strong, hardy and thrifty in growth, bearing its lovely burden of flowers all summer.

Magna Charta (H. P.)—Extra large, full flowers, very double; of fine form and sweet. Color clear rosy red, beautifully flushed with violet crimson. A sure and profuse bloomer; one of the hardiest and best for general planting. Large, light green foliage. Flowers very fragrant.

Margaret Dickson (H. P.)—A magnificent rose, white, with pale flesh. Extra large flower, of splendid form and substance, with waxy shell-like petals, fragrant and pleasing. A vigorous and free-flowering variety, with handsome, large, dark green foliage.

Marshall P. Wilder (H. P.)—One of the best dark red Hybrid Perpetuals. The flowers are large and perfect in form, on good lengths of stems, making them very desirable for cut flowers. Color, bright cherry red, changing to crimson. Very fragrant. It continues to bloom profusely long after the other Hybrid Perpetuals are out of flower.

Paul Neyron (H. P.)—The largest rose. This reliable and well-known H. P. rose, sometimes called the "peony rose," still leads all others of its color and class. Color clear pink. Added to its other qualities, it is entirely hardy, also very fragrant. Has fine, erect habit, is a

PREMIER

strong grower, beautiful, large, smooth, glossy foliage.

Pink Maman Cochet (H. T.)—This superb rose is well known as a queen among roses—one of the best and most beautiful varieties ever grown, and quite hardy. The flowers are of enormous size, very full and of great depth and substance, borne on long, strong stems, just right for making bouquets. Color, rich coral-pink, elegantly shaded with rosy crimson.

Premier (H. T.)—A seedling from Ophelia. A deliciously fragrant, beautifully formed, rich dark pink rose of good size. Stems long, strong and thornless; plant robust.

Prince Camile De Rohan (H. P.)—This is a magnificent rose, celebrated the world over for its large, handsome, fragrant flowers and the freedom with which they are produced. The color is a deep, rich velvety crimson passing to intense maroon.

Radiance (H. T.)—An erect, strong-growing rose, producing an abundance of blossoms. In color of flower it is both unique and beautiful—bright carmine rose with opal and coppery reflections. As its name suggests, it is radiantly beautiful.

Sunburst (H. T.)—A handsome, long, yellow bud, opening to cup-shaped flower of light sulphur yellow. Plant strong and spreading, with few thorns.

Ulrich Brunner (H. P.)—One of the best Hybrid Perpetual roses. Large, fragrant, perfectly formed blooms of distinctly light red, borne freely on very vigorous plants, essential to any collection.

PRINCE CAMILE DE ROHAN

Roses (Continued)

FRAU KARL DRUSCHKI

White Maman Cochet (H. T.)—A splendid rose. Has all the good qualities of Maman Cochet. Like some other white roses, this variety, especially in the autumn, shows pink markings on the outside petals when the flower is in bud. When open, the blooms are pure white and entrancingly lovely, large, fragrant, hardy and freely produced.

Dwarf Polyantha or Everblooming Baby Roses

Prices on Dwarf Roses

	Each	Ten
2 Year Strong Bushes	\$0.65	\$6.00

This type has been in existence only a few years, but so much were they needed and so admirably do they meet the need, there is no class of roses today being so widely planted nor so high in general estimation. They are such splendid, hardy, showy, compact bedders; they keep their color so well and continue in full bloom through such a remarkably long season, there is no end to the uses to which they may be put.

Bennington, Vt., Feb. 11, 1927.
Kelly Brothers Nurseries,
Dansville, N. Y.

Gentlemen:

I have had sad experience with nursery stock. Hundreds of trees not True to Name have been cut out of my orchard. Trees from you have always been True to Name.

I am enclosing another order.

Yours truly,

ALBERT W. VARNEY, Supt.,
State Board of Education,
Bennington Southwest District.

Crimson Baby Rambler—This is the original dwarf baby rambler. One of the best hardy bedding roses in existence. The foliage is dark, glossy green and is remarkably free from insects and fungus. The flowers are borne in clusters of 20, 30 or more—in every way resembling the blossom of the climbing Crimson Rambler. It blooms outdoors from May to November and indoors the year around.

Pink Baby Rambler—The showiest and prettiest of the pink "baby" roses. This charming and dainty little variety is of beautifully rounded habit and is a huge bouquet of brilliant bloom. The color is irresistible.

White Baby Rambler—As delicately tinted and as full of clusters as any Polyantha rose. Its pure white flowers are perfectly double, and bloom with the unceasing freedom of the reds and pinks of this class.

Hardy Everblooming Climbing Roses

Prices on Climbing Roses

	Each	Ten
2 Year, Strong Bushes	\$0.60	\$5.00

Crimson Rambler—The best known and most popular of all the climbing roses. A rapid grower, making sometimes 8 to 10 feet in a season. Flowers are borne in clusters of 15 to 25 perfectly shaped blossoms of a rich glowing crimson. When in full bloom the vine appears to be a perfect mat of rich red flowers—perfectly hardy everywhere.

Climbing American Beauty—The latest triumph in American rose growing—the true Climbing American Beauty in all its promise and glory. The same as American Beauty practically. Large flowers, each produced on separate stems, vivid rosy-crimson in color, with delicious fragrance.

Dorothy Perkins (Pink)—This is one of the new rambler types. Has the same strong habit of growth as the Crimson. Flowers are borne in large clusters of 25 to 30 and are a beautiful shell pink. The individual flower is larger than the Crimson Rambler. A valuable acquisition to the Climbing Roses.

Dorothy Perkins (White)—A white flowered form of Dorothy Perkins, very free of bloom and especially valuable because of the rarity of good white climbing roses.

Yellow Rambler (Goldfinch)—Light canary shade; clusters smaller, individual flowers larger than Crimson.

Helpful Suggestions to Planters Setting Out Young Trees

PREPARE rich, deep bed of mellow soil and have the land sufficiently drained to relieve the roots from standing water. To insure a fine growth, land should be in as good condition as is required for a crop of corn, wheat or potatoes.

We use great care in digging and packing, but the loss of some small roots and fibres is unavoidable. If stock is properly prepared before it is planted, no permanent injury will result from this. The preservation of the natural balance between top and roots renders a vigorous cutting back of the former absolutely necessary in most cases.

Planting and Mulching and After Culture

Make the holes large enough to admit the roots without any cramping and deep enough to bring the tree to its natural depth. The fine surface soil should be used in covering the roots and this should be carefully worked among them.

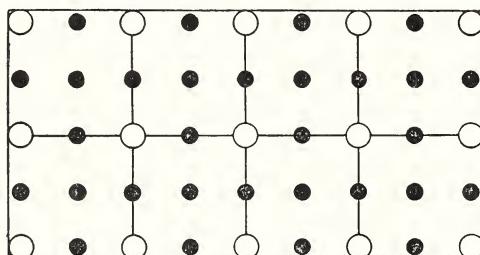

If the ground is dry, it is well to pour in some water when the hole is partially filled. See that the ground is firmly and solidly packed over all parts of the roots by exerting the full weight of the plant, and open it up so that there will be no opportunity for dry air or frost to enter and destroy roots deprived of their natural protection. Failure to pack the earth solidly is a most frequent cause of failure in the planting of nursery

Therefore, prune off broken ends of roots (a smooth cutting root granulates and extends sooner than one broken off) cut back the tops to the extent of one-half the previous season's growth, taking care at all times to prune in such a manner as will tend to develop a head sufficiently open to admit air and light freely.

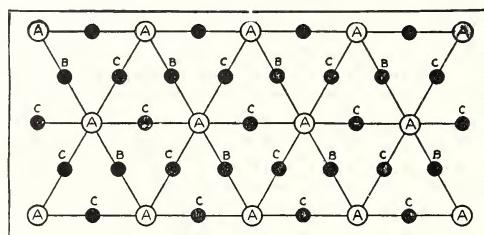

Evergreen and other ornamental trees should be pruned very little. If not ready to plant when the stock arrives, place roots in a trench and cover them with mellow earth well packed.

Distances for Planting

Standard Apples	40 feet apart each way
Standard Pears and Strong Growing Cherries	20 feet apart each way
Duke and Morello Cherries	18 feet apart each way
Standard Plums, Peaches, Apricots and Nectarines	16 to 18 feet apart each way
Dwarf Pears, Dwarf Apples and Quinces	10 to 12 feet apart each way
Grapes	Rows of 10 to 16 feet apart; 7 to 16 feet in rows
Currants and Gooseberries	4 feet apart
Raspberries and Blackberries	3 to 4 feet by 5 to 7 feet
Strawberries, for field culture	1 by 3 to 3½ feet
Strawberries, for garden culture	1 to 2 feet apart
Asparagus in beds	1 by 1½ feet
Asparagus in fields	1 by 3 feet

SQUARE PLAN for Setting an Orchard. Open circle represents permanents, 40 ft. apart; and dots fillers, 20 ft. apart. The latter to be removed in twenty years. These are distances adopted by most planters.

TRIANGULAR PLAN for Setting an Orchard. A permanent, set 40 ft. apart. C and B fillers, 20 ft. apart. C fillers to be removed in fifteen years. B fillers to be removed in 25 years. These are distances adopted by most planters.

How to Order From Kelly Brothers' Nurseries

10% Cash Discount on Cash Orders Received On or Before March 25.
After This Date, 3%

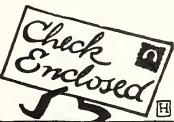

This Catalog Is Our Salesman

and we will comply with the request if it is at all possible.

We pack and ship all winter to Southern states, though our regular spring packing and shipping season usually opens here about the first of March and continues well into the month of May. The planting season is not regulated by any particular month nor by the state of vegetation where the planting is to be done, but by the condition of the trees to be planted. For that reason trees can be shipped with safety from Dansville to localities several degrees south even if they do not arrive until the ordinary transplanting season in that locality has passed.

Terms—How to Remit

Cash with order except on large orders when satisfactory reference must be given and the order accompanied by one-fourth cash, and shipment will be made C. O. D. the balance.

For the benefit of customers who order early but who do not care to spare all of the money when order is sent, we will accept early orders accompanied by one-third cash and reserve stock, balance of the amount to be sent us when stock is ordered shipped.

Prices in this catalog supersede all previous prices and are subject to change without notice.

Remittances should be made by Post Office Money Order, Express Money Order, New York Draft, Personal Check, or Registered Mail. We otherwise disclaim all responsibility.

Every Tree Guaranteed

We guarantee every tree to be up to the grade specified, or better. Many times trees

AS our orders are shipped in the rotation in which they are received we advise the placing of orders early. If for any reason an order is to be shipped on a specified date, make a note on the order

are sold by height only. This we believe to be very misleading, as we have seen trees which belong to the second or third grade as graded by caliper, sold for first grade, as they had the required height. We grade and sell our trees both by height and caliper, and believe this the only way giving entire satisfaction to the planter.

Boxing and Packing

We box and pack all orders without charge. They are put up in boxes or bales lined with heavy paper to guard against drying out of the stock.

Trees and plants are packed in moist excelsior and straw. This is expensive, but good packing pays the customer and pays us, for we guarantee the arrival of stock in good condition.

Rates

We allow hundred rates on lots of fifty or more trees, providing your order does not call for less than ten trees of any one variety.

Small Orders

Because of the increased cost of land, labor, implements, packing material, etc., there is no profit in orders for less than \$2.00, and we cannot accept orders for smaller amounts.

Direct Personal Supervision

Every department, from the planting, propagating and maturing of the trees to the selling through our catalog is in the direct charge of a member of our firm. Following are the names of the members and the department to which each gives his attention:

JAMES A. KELLY—Selection and planting of seedlings.

EDWARD T. KELLY—Selection of scions and budding.

WILLIAM F. KELLY—Digging and grading of trees.

RICHARD A. KELLY—Selling through catalog and correspondence.

CLEMENT A. KELLY—Packing and shipping of orders.

Freight and Express Rates from Kelly Brothers' Nurseries

MISREPRESENTATION of the cost of getting stock from us by freight or express is sometimes made by competitors. Remember, if you bought your stock delivered, or freight prepaid, that cost of such prepayment would be included in purchase price. Do not be influenced by agents or others who say the cost of transportation will bring our prices up as high as theirs, because that is not true. When you buy freight prepaid, you are not only pay-

ing the cost in another way but also in many cases you are paying the agent's commission.

Below you will find a statement of the freight and express rates to certain representative points. If you do not happen to live in any of the places mentioned, you can readily figure out what the rate would be to your station by comparison with a place about equally distant from Dansville, N. Y.

more than pay Transportation Charges.*

Bechtel's Flowering Crab

The Bechtel's Flowering Crab, illustrated above, is one of the most beautiful of all Flowering Shrubs or Trees, and is one of the finest for lawn decoration. It blooms very young and produces in profusion double, delicate pink flowers, resembling at a distance dainty little roses. It has spreading branches and dark green foliage, and is perfectly hardy. We have this season some exceptionally fine Bechtel's Flowering Crab on which we are making very attractive prices.

PRICES ON BECHTEL'S FLOWERING CRAB

2 to 3 ft. \$1.00 each; \$7.50 per 10

3 to 4 ft. \$1.25 each; \$10.00 per 10
